Reflections on Classroom Thinking Strategies Eric Frangenheim, 2005-11-05 Designed to encourage a passion for teaching this excellent resource helps teachers create a classroom climate that empowers all students to be better thinkers

Reflections on Classroom Thinking Strategies Eric Frangenheim, 2012 A series of ideas and thinking tools based on Bloom's Taxonomy of the Cognitive Domain Drawn from Eric Frangenheim's 40 plus years as a teacher Learning and Teaching in the Chinese Classroom Shane N. Phillipson, Bick-har Lam, 2011-10-01 A major concern of all education authorities around the world is the challenge that schools face in catering for learner diversity That this concern is shared by authorities in East Asia including the Education Bureau EDB of Hong Kong is surprising given the high academic achievement of students from this part of the world This book helps to meet this challenge for teachers in East Asia by focusing on specific research that helps explain the basis for diversity in the Chinese learner Although there are many textbooks that cover the basic principles of educational psychology few do not focus on the Chinese learner This book makes the link between the broad field of educational psychology and how these theories contribute to our understanding of the Chinese learner This book is unique in that it draws on recent research to illustrate the application of these theories thereby helping teachers and students in teacher education programmes understand the variability in student achievement Our book is based on the idea that the Chinese context is in many ways different to other cultural contexts and that teachers can make a difference to the outcomes of student learning We also draw on our many years of experience in educating future teachers where our students want us to focus on the Chinese classroom Our student teachers also want to be educated by professors who are themselves researchers In drawing on research about the Chinese learner we also bring to our student teachers the richness and value of educational research We also encourage our student teachers to think of themselves as professional researchers in terms of developing an understanding of the research literature and in finding solutions to their classroom problems *Ethics in the Science and Technology Classroom*, 2010-01-01 This edited book on ethics represents the outcomes of an international collaborative project that examined the role and place of bioethics in science and technology curricula As science and technology advance ethical issues increasingly are brought to the fore not only both for scientists and technologists but also for the general public Science and technology education also reflects this shift and thinking and teaching about ethics in the school curriculum has increased A greater emphasis is being placed on society's general scientific and technological literacy and this includes an understanding of socio scientific issues including ethical decision making Although this book has a focus on ethics in the school science and technology curriculum we believe it will also prove useful for those thinking about ethical decision making in a range of contexts outside of the school sector The book will prove useful for University lecturers teachers curriculum developers and policy makers and those that are involved in science and technology decision making more broadly A Teacher's Guide to Coaching: Practical strategies for using coaching practices in schools Jasmine

Miller,2025-03-21 This book is for teachers and learning about using coaching skills and practices with children and young people colleagues parents and the wider school community Research into the area of coaching in schools is still relatively new however the practice of coaching in schools has been evolving over several decades This book gives insights into what coaching can look like in schools and is supported by the sharing of experiences by teachers from around the world It is a book for teachers by teachers who share how they have used coaching in their classrooms and what they have noticed because of doing so It is a collation of ideas around the use of coaching approaches and practices in schools for professional and personal development Through reading this book and trying some of the ideas you will be able to Further your understanding of self both personally and professionally Develop coaching practices that support the development of relationships with learners colleagues and families Expand your toolbox of strategies to engage children and young people in their learning through using different coaching skills Develop knowledge of ways to introduce coaching practices and coaching cultures into your classroom school and your life

Using Reflection and Metacognition to Improve Student Learning Naomi Silver,Matthew Kaplan,Danielle LaVaque-Manty,Deborah Meizlish,2023-07-03 Research has identified the importance of helping students develop the ability to monitor their own comprehension and to make their thinking processes explicit and indeed demonstrates that metacognitive teaching strategies greatly improve student engagement with course material This book by presenting principles that teachers in higher education can put into practice in their own classrooms explains how to lay the ground for this engagement and help students become self regulated learners actively employing metacognitive and reflective strategies in their education Key elements include embedding metacognitive instruction in the content matter being explicit about the usefulness of metacognitive activities to provide the incentive for students to commit to the extra effort as well as following through consistently Recognizing that few teachers have a deep understanding of metacognition and how it functions and still fewer have developed methods for integrating it into their curriculum this book offers a hands on user friendly guide for implementing metacognitive and reflective pedagogy in a range of disciplines Offering seven practitioner examples from the sciences technology engineering and mathematics STEM fields the social sciences and the humanities along with sample syllabi course materials and student examples this volume
