Gastroesophageal Reflux Disease (GERD): Back to Surgery? L. Krähenbühl, M. W. Büchler, E. Frei, C. Klaiber, 1997. This volume provides a detailed and comprehensive review of current knowledge concerning all aspects of gastroesophageal reflux disease (GERD). The opening chapters on its pathogenesis and epidemiology include discussions of *Helicobacter pylori* as an etiological agent and Barrett's esophagus. The bulk of the volume is taken up with critical reviews of all the contemporary approaches to GERD, both medical and surgical, open and laparoscopic, and presents the early results from laparoscopic trials throughout the world. The book concludes with detailed descriptions from expert practitioners of the various alternative laparoscopic fundoplication techniques. This timely publication will be of interest not only to gastroenterologists and gastrointestinal surgeons but to all doctors and general practitioners who must advise and prescribe treatment for patients with this common distressing but remediable complaint.

Benign Lesions of the Esophagus and Cancer Robert Giulini, Richard W. McCallum, 2013-11-11. In an attempt to attain the best possible delimitation of all the problems posed today by benign diseases of the esophagus, 181 authors each agreed to answer one or more of 210 questions that had been drawn up on the subject. These questions, each one deliberately limited and difficult, mostly concerned reflux esophagitis, its natural history, the means of its diagnosis, all existing treatments, and its eventual degeneration. The authors approached are today's most reputed specialists in the fields of epidemiology, gastroenterology, endoscopy, pathology, and surgery of esophageal diseases. The authors were all assigned one or more questions in their own field, none of which was simple; all did their best to synthesize in their replies their own experience on the precise point under review and included all the most useful bibliographical references on the topic. The book is thus the result of an original individual approach to try to

pinpoint the heart of a problem The 210 answers succeed one another in logical progression according to the different diagnostic and therapeutic stages specifying at each step the degree of precision sought Consequently the reader has at his disposal an exceptional synthesis of facts and concepts Opening the book at random he will find at once the detail he is looking for the professional opinion he is lacking or the development of a question he had perhaps not yet asked himself

Difficult Decisions in Thoracic Surgery

Mark K. Ferguson, 2007-03-12. Why do thoracic surgeons need training in decision making? Many of us who have weathered harrowing residencies in surgery feel that after such experiences, decision making is a natural extension of our selves. While this is no doubt true, correct decision making is something that many of us have yet to master. The impetus to develop a text on evidence-based decision making in thoracic surgery was stimulated by a conference for cardiothoracic surgical trainees developed in 2004 and sponsored by the American College of Chest Physicians. During that conference, it became clear that we as thoracic surgeons are operating from a very limited fund of true evidence-based information. What was also clear was the fact that many of the decisions we make in our everyday practices are not only uninformed by evidence-based medicine but often are contradictory to existing guidelines or evidence-based recommendations. The objectives of this book are to explain the process of decision making both on the part of the physician and on the part of the patient and to discuss specific clinical problems in thoracic surgery and provide recommendations regarding their management using evidence-based methodology. Producing a text that will purportedly guide experienced practicing surgeons in the decision making process that they are accustomed to observe on a daily basis is a daunting task. *Hepato-gastroenterology*, 2007.

Recommendations for evidence-based endoscopic surgery Edmund Neugebauer, Stefan Sauerland, 2013-11-22

PRESIDENTIAL ADDRESS There is no doubt that the content of this EAES Consensus Development Conference CDC booklet represents an extremely important contribution to answering the following questions: which area of endoscopic surgery requires quality assurance, what methodology should be employed, what further action is required. In order to try to answer these questions, the Executive Office of the EAES decided to appoint an ad hoc working group which started its activity in 1993. Under the Presidency of Professor Hans Troidl and the scientific mandate of Professor Edmund Neugebauer, the Consensus Development Conferences appeared as one of the essential educational programmes of the EAES. These were organized thanks to the scientific and secretarial assistance of the 2nd Department of Surgery, University of Cologne. Besides the appointed chairperson, each Conference was led by a clinical chairman who included surgical experts from various countries of Europe: J. Perissat, W. Wayand, A. Fingerhut, A. Paul, E. Eypasch, C. K. Kum. Of course, the EAES Congress Presidents

and the panel members should be acknowledged for their important input in the Consensus Conferences From 1994 to 1998 six themes of endoscopic surgery have been assessed and their recommendations were presented and discussed during the European Congresses held in Madrid Trondheim Istanbul and in the World Congress Rome 98
