Institution-wide Reform of Undergraduate Education in Science, Mathematics, Engineering and Technology National Science Foundation (U.S.). Division of Undergraduate Education, 1996 **Transforming Undergraduate Education in Science, Mathematics, Engineering, and Technology** Committee on Undergraduate Science Education, Board on Science Education, Division of Behavioral and Social Sciences and Education, National Research Council, 1999-04-08 Today's undergraduate students future leaders policymakers teachers and citizens as well as scientists and engineers will need to

make important decisions based on their understanding of scientific and technological concepts However many undergraduates in the United States do not study science mathematics engineering or technology SME T for more than one year if at all Additionally many of the SME T courses that students take are focused on one discipline and often do not give students an understanding about how disciplines are interconnected or relevant to students lives and society To address these issues the National Research Council convened a series of symposia and forums of representatives from SME T educational and industrial communities Those discussions contributed to this book which provides six vision statements and recommendations for how to improve SME T education for all undergraduates The book addresses pre college preparation for students in SME T and the joint roles and responsibilities of faculty and administrators in arts and sciences and in schools of education to better educate teachers of K 12 mathematics science and technology It suggests how colleges can improve and evaluate lower division undergraduate courses for all students strengthen institutional infrastructures to encourage quality teaching and better prepare graduate students who will become future SME T faculty

*Improving Undergraduate Instruction in Science, Technology, Engineering, and Mathematics* National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Undergraduate Science Education, Steering Committee on Criteria and Benchmarks for Increased Learning from Undergraduate STEM Instruction, 2003-06-28 Participants in this workshop were asked to explore three related questions 1 how to create measures of undergraduate learning in STEM courses 2 how such measures might be organized into a framework of criteria and benchmarks to assess instruction and 3 how such a framework might be used at the institutional level to assess STEM

courses and curricula to promote ongoing improvements The following issues were highlighted Effective science instruction identifies explicit measurable learning objectives Effective teaching assists students in reconciling their incomplete or erroneous preconceptions with new knowledge Instruction that is limited to passive delivery of information requiring memorization of lecture and text contents is likely to be unsuccessful in eliciting desired learning outcomes Models of effective instruction that promote conceptual understanding in students and the ability of the learner to apply knowledge in new situations are available Institutions need better assessment tools for evaluating course design and effective instruction Deans and department chairs often fail to recognize measures they have at their disposal to enhance incentives for improving education Much is still to be learned from research into how to improve instruction in ways that enhance student learning
