Medina, 2007-05-03 Medina tells us that up to 2% of the urban population in developing countries survives by salvaging materials from waste for recycling which represents up to 64 million scavengers in the world today Despite these numbers we know little about the impact of scavenging on global capitalism development The author examines its historical evolution and its linkages with formal and informal sector productive activities in capitalist and non capitalist societies in case studies from Mexico Brazil Colombia Argentina Egypt the Philippines and India His new book radically alters popular perceptions on scavenging demonstrating that many widely held beliefs are wrong scavenging is not primarily the activity of the poor nor is it a strictly marginal activity the economic impact of scavenging is significant and can increase industrial competitiveness and scavenging can be compatible with a sustainable waste management system Scavenging represents an adaptive response to poverty yet at the same time it can be a resource to cities whose contributions should be recognized and understood
