Recent Sedimentary Carbonates J.D. Milliman, G. Müller, F. Förstner, 2012-12-06 Few fields of research in the earth sciences have produced as much data and literature as the study of carbonate sediments and rocks The past 25 years in particular have seen a significant increase in studies concerning modern marine and fresh water carbonates With the present worldwide interest in oceanographic research marine carbonates have received the bulk of the attention particularly with respect to shallow water sediments However in terms of the variety of environments compositions and modes of formation non marine carbonates probably encompass a wider spectrum than do marine types Our purpose is to present a two volume treatise on carbonate sediments and rocks both marine and non marine We have confined ourselves to the discussion of modern Holocene environments sediments and components assuming that the compilation of these data will not only be relevant to those working with modern carbonates but will also serve as a necessary reference source for those interested in ancient analogs The first volume by MILLIMAN deals almost exclusively with marine environments while the second volume by MULLER and FORSTNER will concentrate on the non marine carbonates
