love Jack and the Beanstalk to initiation and growth and The Emperor s New Clothes to today s political crises These stories offer a food that nourishes both the spiritual and mundane components of life Specific visualizations and affirmations correspond to each of the major arcana cards and new layouts and divination methods for use with her Inner Child Cards deck will allow those who are familiar with it to build on previous knowledge This beautiful guidebook offers a personal therapeutic journey through fairy tale symbolism that is a perfect accompaniment to the Inner Child Cards **The Single Monad Model of the Cosmos** Mohamed Haj Yousef,2014-06-27 Ibn Arabi is the only scholar who was able to formulate a unique cosmological model that is capable of explaining our observations as well as many phenomena in physics and cosmology and even solve some perplexing modern and historical riddles in science and philosophy such as the EPR paradox and Zeno paradoxes of motion Moreover the Single Monad Model explains for the first time in history the importance of the week as a basic unit of space and time together This prodigious theory is based on the notion of the intertwining days where Ibn Arabi shows that at every instance of time there is indeed one full week of creation that takes place in the globe Since its publication in 2008 this book has triggered an overwhelming response and I hope this expanded edition will help promote further Ibn Arabi s wisdom that is still buried in his multitudes of books and treatises Ibn Arab is one of the most prominent figures in Islamic history especially in relation to Sufism and Islamic philosophy and theology In this book we want to explore his cosmology and in particular his view of time in that cosmological context comparing his approaches to the relevant conclusions and principles of modern physics whenever possible We shall see that Ibn Arab had a unique and comprehensive view of time which has never been discussed by any other philosopher or scientist before or even after Ibn Arab In the final two chapters we shall discuss some of the ways his novel view of time and cosmology may be used to build a complete model of the cosmos that may deepen and extend our understanding of the world while potentially solving some of the drawbacks and paradoxes in the current cosmological models of modern physics As we discuss in the opening chapter there is no doubt that time is one of the most important issues in physics cosmology philosophy and theology and hundreds of books and articles have been published in these fields However none of these studies have fully developed Ibn Arab s unique view of time in its cosmological dimensions although his conception of time is indeed central to understanding for example his controversial theory of the oneness of being One possible reason for this relative neglect is the difficult symbolic language he usually used Also he didn t discuss this subject at length in any single place in his extant works not even in chapters 59 291 and 390 of the Fut h t whose titles relate directly to time so we must piece together his overall cosmological understanding of time from his scattered treatments in many works and different contexts within his magnum opus the Fut h t and other books Therefore this book may be considered the first comprehensive attempt to set forth all the relevant dimensions of time in Ibn Arab s wider cosmology and cosmogony To start with Ibn Arab considers time to be a product of our human imagination without any real separately existing entity Nevertheless he still considers it to be one of the four main constituents of

existence We need this imagined conception of time to chronologically arrange events and what for us are the practically defining motions of the celestial orbs and other physical objects but for Ibn Arab real existence is attributable only to the actually existing thing that moves not to motion nor to time nor space in which this motion is observed Thus Ibn Arab distinguishes between two kinds of time natural and para natural and he explains that they both originate from the two forces of the soul the active force and the intellective force respectively Then he explains that this imaginary time is cyclical circular relative discrete and inhomogeneous Ibn Arab also gives a precise definition drawing on the specific usage of the Qur an and earlier Arab conceptions of time of the day daytime and night showing how these definitions are related to the relative motions of the celestial orbs including the earth where every orb has its own day and those days are normally measured by our normal observable day that we count on the earth
