*Long-term Consequences of Early Environment* C. Jeya K. Henry, Stanley J. Ulijaszek, 1996-06-27 In this book a leading team of researchers explore the long term effects of early environment in humans Protein and Energy Requirements in Infancy and Childhood Jacques Rigo, Ekhard E. Ziegler, 2006-01-01 In this volume world renowned specialists review the latest scientific information and recommendations for protein and energy requirements of infants and children New data obtained with the latest techniques show significantly lower requirements for both energy and protein than previously thought This will have far reaching implications for nutrition and health not only during infancy and childhood but also for long term health outcomes such as obesity and related disorders Indeed for the latest generation of some infant formulas many of the new nutrition concepts presented in this volume especially those concerning protein level and quality have already been translated into clinically tested products that are coming ever closer to the gold standard human milk not only in terms of composition but also of outcome The important public health implications of the information reviewed in this volume provide essential reading for pediatricians clinical investigators and health workers engaged in the prevention of nutrition related disorders Long term consequences of early feeding ,1995 **Long-term Consequences of Early Feeding** Collectif,, Alan Lucas (MD.), 1999 *The Window of Opportunity: Pre-Pregnancy to 24 Months of Age* D. J. P. Barker, R. L. Bergmann, P. L. Ogra, 2008-07 There is no longer any doubt that the inherited genetic constitution of the individual has a large influence on the entire life cycle from human fetal development and pre and postnatal growth to subsequent health status However growing evidence suggests that this predisposition is not rigid but that early genetic imprinting caused by exposure to a diverse spectrum of nutrients macromolecules microbial agents and other cellular or soluble components present in the external environment is also of importance According to this concept of the developmental origins of adult diseases intrauterine and early life events play an important role in the etiology of human diseases there seems to exist a critical window of opportunity in the human infant before and during pregnancy and up to 24 months of age Altered exposure to different environmental agents during this critical period may determine the nature of responses in the perinatal period and the expression of specific disease states in later life The papers presented in this publication thus focus on the impact of perinatal growth nutrition environmental microflora and host immune responses on the outcome of health and disease in later life **Long-term Consequences of Early Feeding** John Boulton, Zvi Laron, Jean Rey, 1996

imprinting has led to new insight into developmental programming This highly novel aspect of leptin's action is reviewed extensively in the final chapter of this book by the Auckland group Vickers Krechowec Gluckman and Breier In the last five years it has been shown that at least in rodents leptin acts as an important neurotrophic factor promoting the early postnatal maturation of neural pathways within the hypothalamus The authors review experimental evidence originating largely from their own work which shows that therapeutic intervention with leptin in the rodents early postnatal life can potentially reverse or substantially ameliorate the consequences of developmental malprogramming and that this effect is highly influenced by both gender and postnatal diet
