*Making Things Perfectly Queer* Alexander Doty, 1993      *The Statistical Theory of Shape* Christopher G.

Small, 2012-12-06 In general terms the shape of an object data set or image can be defined as the total of all information that is invariant under translations rotations and isotropic rescalings Thus two objects can be said to have the same shape if they are similar in the sense of Euclidean geometry For example all equilateral triangles have the same shape and so do all cubes In applications bodies rarely have exactly the same shape within measurement error In such cases the variation in shape can often be the subject of statistical analysis The last decade has seen a considerable growth in interest in the statistical theory of shape This has been the result of a synthesis of a number of different areas and a recognition that there is considerable common ground among these areas in their study of shape variation Despite this synthesis of disciplines there are several different schools of statistical shape analysis One of these the Kendall school of shape analysis uses a variety of mathematical tools from differential geometry and probability and is the subject of this book The book does not assume a particularly strong background by the reader in these subjects and so a brief introduction is provided to each of these topics Anyone who is unfamiliar with this material is advised to consult a more complete reference As the literature on these subjects is vast the introductory sections can be used as a brief guide to the literature      **Computing for Ordinary**

**Mortals** Robert St. Amant, 2013 In *Computing for Ordinary Mortals* cognitive scientist and AI expert Robert St Amant explains what he calls the really interesting part of computing which are the ideas behind the technology They're powerful ideas and the foundations for everything that computers do but they are little discussed This book will not tell you how to use your computer but it will give you a conceptual tour of how it works Some of the ideas like modularity which are so embedded in what we do as humans can also give us insight into our own daily activities how we interact with other people and in some cases even what's going on in our heads Computing is all around us and to quote Richard Hamming the

influential mathematician and computer scientist The purpose of computing is insight not numbers and it is this insight that informs the entire book      **Super Quest** ,1995 Science by Barbara Taylor My body by Brigid Avison Dinosaurs by Rod Theodorou Animals by Anita Ganeri Transportation by Christopher Maynard Our planet by Anita Ganeri Space by Carole Stott
