Scientific Models and Decision Making Eric Winsberg, Stephanie Harvard, 2024-01-31 This Element introduces the philosophical literature on models with an emphasis on normative considerations relevant to models for decision making Chapter 1 gives an overview of core questions in the philosophy of modeling Chapter 2 examines the concept of model adequacy for purpose using three examples of models from the atmospheric sciences to describe how this sort of adequacy is determined in practice Chapter 3 explores the significance of using models that are not adequate for purpose including the purpose of informing public decisions Chapter 4 provides a basic framework for values in modelling using a case study to highlight the ethical challenges in building models for decision making It concludes by establishing the need for strategies to manage value judgments in modelling including the potential for public participation in the process **Scientific Models**

Philip Gerlee, Torbjörn Lundh, 2016-07-07 A zebrafish the hull of a miniature ship a mathematical equation and a food chain what do these things have in common They are examples of models used by scientists to isolate and study particular aspects of the world around us This book begins by introducing the concept of a scientific model from an intuitive perspective drawing parallels to mental models and artistic representations It then recounts the history of modelling from the 16th century up until the present day The iterative process of model building is described and discussed in the context of complex models with high predictive accuracy versus simpler models that provide more of a conceptual understanding To illustrate the diversity of opinions within the scientific community we also present the results of an interview study in which ten scientists from different disciplines describe their views on modelling and how models feature in their work Lastly it includes a number of worked examples that span different modelling approaches and techniques It provides a comprehensive introduction to scientific models and shows how models are constructed and used in modern science It also addresses the approach to and the culture surrounding modelling in different scientific disciplines It serves as an inspiration for model building and also facilitates interdisciplinary collaborations by showing how models are used in different scientific fields The book is aimed primarily at students in the sciences and engineering as well as students at teacher training colleges but will also appeal to interested readers wanting to get an overview of scientific modelling in general and different modelling approaches in particular *Models and Modeling* Myint Swe Khine, Issa M. Saleh, 2011-03-01 The process of developing

models known as modeling allows scientists to visualize difficult concepts explain complex phenomena and clarify intricate theories In recent years science educators have greatly increased their use of modeling in teaching especially real time dynamic modeling which is central to a scientific investigation Modeling in science teaching is being used in an array of fields everything from primary sciences to tertiary chemistry to college physics and it is sure to play an increasing role in the

Adam Toon,2012-10-17 Scientists often try to understand the world by building simplified and idealised models of it Adam Toon develops a new approach to scientific models by comparing them to the dolls and toy trucks of children s imaginative games and offers a unified framework to solve difficult metaphysical problems and help to make sense of scientific practice

in Science Education Tom Bielik,Moritz Krell,Laura Zangori,Orit Ben Zvi Assaraf,2023-11-15 Understanding the complexity of the natural world and making sense of phenomena is one of the main goals of science and science education When investigating complex phenomena such as climate change or pandemic outbreaks students are expected to engage in systems thinking by considering the boundaries of the investigated system identifying the relevant components and their interactions and exploring system attributes such as hierarchical organization dynamicity feedback loops and emergence Scientific models are tools that support students reasoning and understanding of complex systems and students are expected to develop their modeling competence and to engage in the modeling process by constructing testing revising and using models to explain and predict phenomena Computational modeling tools for example provide students with the opportunity to explore big data run simulations and investigate complex systems Therefore both systems thinking and modeling approaches are important for science education when investigating complex phenomena In Defense of Scientism Byron K.

Jennings,2015 This book is a series of short perceptive and witty essays about science and how it works The author a long time theoretical physicist and science administrator shares his hard won insights about science gained from years of working in the trenches The approach is eclectic with examples and quotes from a wide variety of sources However a unified view of science is presented namely that science is simply the straightforward application of model building and testing against observation The technique is applicable to all walks of life hence the title of the book **Steps Towards a Unified Basis**

for Scientific Models and Methods Inge S. Helland,2010 Culture in fact also plays an important role in science which is per se a multitude of different cultures The book attempts to build a bridge across three cultures mathematical statistics quantum theory and chemometrical methods Of course these three domains should not be taken as equals in any sense But the book holds the important claim that it is possible to develop a common language which at least to a certain extent can create direct links and build bridges From this point of departure the book will be of interest to the following three types of

scientists statisticians quantum physicists and chemometricians and in particular statisticians and physicists who are interested in interdisciplinary research Written at a level that is accessible to general readers not only the academics the book will appeal to graduate students and mathematically educated persons of all disciplines as well as philosophers pure and applied mathematicians and the general public

Breaking and Making Models Christoph F. E. Holzhey ,Marietta Kesting,Claudia Peppel,2025-05-20 Practically anything can be a model of or for something else What characterizes models is rather their specific reductive relationality which often promotes understanding but is always generative rather than merely representational The essays in Breaking and Making Models engage with the normative and performative qualities of models their aesthetic and political dimensions and their world making potentials Bringing such perspectives into a broad interdisciplinary dialogue this book explores ways to work creatively with models

Social Scientific Models for Interpreting the Bible John Pilch,2021-10-01 Fourteen members of The Context Group honor Bruce J Malina and his scholarship in this volume by following his consistent example of developing or using explicit social scientific models to interpret documents from the ancient Mediterranean world

Ordinary features of that cultural world such as gossip reciprocity a pervasive military presence the power of women and becoming a follower of Jesus stand out with greater clarity in the Bible when a reader understands the cultural matrix in which such social dynamics function These essays reflect The Context Group s more than twenty years of collaborative experience in researching the cultural context of the Bible New insights are built on the solidly established foundations of their earlier cross cultural studies Readers will find the individual essays enlightening and challenging Taken as a whole they form a valuable resource and a stimulating and helpful aid to further study Modeling Students' Mathematical Modeling Competencies Richard Lesh, Peter L. Galbraith, Christopher R. Haines, Andrew Hurford, 2013-03-17 Modeling Students Mathematical Modeling Competencies offers welcome clarity and focus to the international research and professional community in mathematics science and engineering education as well as those involved in the sciences of teaching and learning these subjects
