Making Genes Making Waves A Social Activist In Science:

Making Genes, Making Waves Jonathan R. Beckwith, 2002-10-15 A thoroughly engrossing memoir recounting Beckwith's halting steps toward scientific triumphs among them the discovery of the genetic element that turns genes on and his emergence as a world class political activist this book is also a compelling history of the major controversies in genetics over the last thirty years

Making Genes, Making Waves Jon Beckwith, 2009-07-01 A thoroughly engrossing memoir recounting Beckwith's halting steps toward scientific triumphs among them the discovery of the genetic element that turns genes on and his emergence as a world class political activist this book is also a compelling history of the major controversies in genetics over the last thirty years

As Gods Matthew Cobb, 2022-11-15 The thrilling and terrifying history of genetic engineering In 2018 scientists manipulated the DNA of human babies for the first time As biologist and historian Matthew Cobb shows in *As Gods* this achievement was one many scientists have feared from the start of the genetic age Four times in the last fifty years geneticists frightened by their own technology have called a temporary halt to their experiments They ought to be frightened Now we have powers that can target the extinction of pests change our own genes or create dangerous new versions of diseases in an attempt to prevent future pandemics Both awe inspiring and chilling *As Gods* traces the history of genetic engineering showing that this revolutionary technology is far too important to be left to the scientists They have the power to change life itself but should we trust them to keep their ingenuity from producing a hellish reality

Biotechnology Steven P. McGiffen, 2005-03-20 Frankenfoods designer babies Dolly the Sheep and Raelian fantasists few subjects generate as much controversy and misinformation as biotechnology This book takes the reader behind the headlines to examine the new laws on genetic based technologies who's making them and why Steven P McGiffen offers a lucid analysis

of the real implications of biotechnology legislation in the US and the EU and contrasts it with approaches to agricultural and medical biotech in the rest of the world He argues that the EU and America are removing decision making power from the people and their elected representatives Biotechnology regulation is a local manifestation of a global process of transferring power from the people to corporations from poor countries to rich ones from the public to the private He shows that biotechnology demands effective and democratic international decision making procedures and that we are very far from achieving them This is an indispensable guide for activists and anyone who wants to know more about how to control biotech regulation and how to resist handing control of our future to corporations

Brenner's Encyclopedia of Genetics Stanley Maloy, Kelly Hughes, 2013-03-03 The explosion of the field of genetics over the last decade with the new technologies that have stimulated research suggests that a new sort of reference work is needed to keep pace with such a fast moving and interdisciplinary field Brenner's Encyclopedia of Genetics Second Edition Seven Volume Set builds on the foundation of the first edition by addressing many of the key subfields of genetics that were just in their infancy when the first edition was published The currency and accessibility of this foundational content will be unrivalled making this work useful for scientists and non scientists alike Featuring relatively short entries on genetics topics written by experts in that topic Brenner's Encyclopedia of Genetics Second Edition Seven Volume Set provides an effective way to quickly learn about any aspect of genetics from Abortive Transduction to Zygotes Adding to its utility the work provides short entries that briefly define key terms and a guide to additional reading and relevant websites for further study Many of the entries include figures to explain difficult concepts Key terms in related areas such as biochemistry cell and molecular biology are also included and there are entries that describe historical figures in genetics providing insights into their careers and discoveries This 7 volume set represents a 25% expansion from the first edition with over 1600 articles encompassing this burgeoning field Thoroughly up to date with many new topics and subfields covered that were in their infancy or not in existence at the time of the first edition Timely coverage of emergent areas such as epigenetics personalized genomic medicine pharmacogenetics and genetic enhancement technologies Interdisciplinary and global in its outlook as befits the field of genetics Brief articles written by experts in the field which not only discuss define and explain key elements of the field but also provide definition of key terms suggestions for further reading and biographical sketches of the key people in the history of genetics

Reordering Life Stephen Hilgartner, 2017-05-19 How the regimes governing biological research changed during the genomics revolution focusing on the Human Genome Project The rise of genomics engendered intense struggle over the control of knowledge In *Reordering Life* Stephen Hilgartner examines the genomics revolution and develops a novel approach to studying the dynamics of change in knowledge and control Hilgartner focuses on the Human Genome Project HGP the symbolic and scientific centerpiece of the emerging field showing how problems of governance arose in concert with new knowledge and technology Using a theoretical framework that analyzes knowledge control regimes Hilgartner

investigates change in how control was secured contested allocated resisted justified and reshaped as biological knowledge was transformed Beyond illuminating genomics Reordering Life sheds new light on broader issues about secrecy and openness in science data access and ownership and the politics of research communities Drawing on real time interviews and observations made during the HGP Reordering Life describes the sociotechnical challenges and contentious issues that the genomics community faced throughout the project Hilgartner analyzes how laboratories control access to data biomaterials plans preliminary results and rumors compares conflicting visions of how to impose coordinating mechanisms examines the repeated destabilization and restabilization of the regimes governing genome databases and examines the fierce competition between the publicly funded HGP and the private company Celera Genomics The result is at once a path breaking study of a self consciously revolutionary science and a provocative analysis of how knowledge and control are reconfigured during transformative scientific change

Killer Instinct Nadine Weidman, 2021-10-26 In the 1960s biologists and social scientists engaged in a public debate about human nature The question whether humans are innately aggressive or cooperative eventually receded but the oppositional nature nurture binary created in the course of the debate left a lasting legacy that would underpin subsequent discussions of human behavior

Science and Technology in Society Soraya Boudia, Ashveen Peerbaye, 2025-06-17 Science and technology profoundly shape the world today Over the last two centuries they have become powerful engines of change accounting for some of the most important forms of human activity inseparable from social political and economic life Analyzing their modes of production the dynamics of their dissemination the different forms of their use and opposition to them is a major academic and political challenge Science and Technology in Society offers a broad overview of work carried out in France in the international multi disciplinary field of Science and Technology Studies STS and is the product of a collaboration between some thirty authors It aims to provide an introduction to this field of research its development benefits and the new perspectives that are emerging This book presents and discusses studies that are still little known in France even though paradoxically many researchers from French institutions make decisive contributions to international work in this field

Through the Mirrors of Science Francesco Coniglione, 2013-05-02 Is the objective that the European Union set itself in 2000 that is to be the most competitive knowledge based society and economy by 2010 still realistic The momentous year has arrived but it is discouraging to note that very few steps have been made in the direction that was fixed What has gone wrong Were the philosophical epistemological and economic conditions adequate to achieve the desired result This book the result of a research project commissioned by the European Commission critically investigates the society of knowledge and the way in which the European Union has proceeded towards it examining first of all the premises and the contributions that the disciplines of Science and Technological Studies can provide In this way we have proposed innovative theoretical and epistemological bases for a multidisciplinary approach making use of the Modelling Approach to Science and therefore insisting on the

function that human sciences can have for a society of knowledge that hinges not so much on an industrialist scenario but a humanist one that eschews hyper specialization and instead privileges creativity flexibility imagination and innovation economy

A Short History of Medical Genetics Peter S. Harper, 2008-10-24 An eminent geneticist veteran author OMMG Series Editor and noted archivist Peter Harper presents a lively account of how our ideas and knowledge about human genetics have developed over the past century from the perspective of someone inside the field with a deep interest in its historical aspects Dr Harper has researched the history of genetics and has had personal contact with a host of key figures whose memories and experiences extend back 50 years and he has interviewed and recorded conversations with many of these important geneticists Thus rather than being a conventional history this book transmits the essence of the ideas and the people involved and how they interacted in advancing and sometimes retarding the field From the origins of human genetics through the contributions of Darwin Mendel and other giants the identification of the first human chromosome abnormalities and up through the completion of the Human Genome project this Short History is written in the author's characteristic clear and personal style which appeals to geneticists and to all those interested in the story of human genetics

Mobilizing Mutations Daniel Navon, 2019-09-20 With every passing year more and more people learn that they or their young or unborn child carries a genetic mutation But what does this mean for the way we understand a person

Today genetic mutations are being used to diagnose novel conditions like the XYY Fragile X NGLY1 mutation and 22q11.2 Deletion syndromes carving out rich new categories of human disease and difference. Daniel Navon calls this form of categorization genomic designation and in *Mobilizing Mutations* he shows how mutations and the social factors that surround them are reshaping human classification. Drawing on a wealth of fieldwork and historical material, Navon presents a sociological account of the ways genetic mutations have been mobilized and transformed in the sixty years since it became possible to see abnormal human genomes, providing a new vista onto the myriad ways contemporary genetic testing can transform people's lives. Taking us inside these shifting worlds of research and advocacy over the last half century, Navon reveals the ways in which knowledge about genetic mutations can redefine what it means to be ill, different, and ultimately human.

American Mass Murderers Valrie Plaza, 2015-03-02. *American Mass Murderers* collects nearly 700 pages of information about the most notorious killers in America as well as some of the lesser known murderers.

Designs on Nature Sheila Jasanoff, 2005. Biology and politics have converged across much of the industrialized world. Taking a look at some twenty-five years of scientific and social development, this work compares the politics and policy of the life sciences in Britain, Germany, the United States, and in the European Union as a whole.
