Monetary Proposals for Social Reform Margaret Good Myers,1970      *Monetary Proposals for social reform* Margaret Good Myers,1970      **Monetary and Fiscal Thought and Policy in Canada, 1919-1939** Irving Brecher,1957-12-15 In this careful and thorough study of a Canadian field which has been relatively untouched in recent years Dr Brecher records and comments on the development of monetary and fiscal thinking in Canada in the inter war period and its impact on public policy in the federal sphere Examining Canadian opinion about economic theory during this time the author draws on four fields of thought that of government and other public officials of businessmen such as bankers and their views on what should be done about the depression of the radical group such as those prominent in the formation of the CCF and Social Credit parties and of economists prominent in the universities Dr Brecher points out in his preface that his inquiry is rooted in the conviction that the problems associated with cyclical fluctuations remain sufficiently complex to make an understanding of the developments of the twenties and thirties an indispensable condition for effective stabilization policy He finds the twenties distinguished only in the superficial and imperfect diagnosis of and remedial suggestions for unemployment made chiefly by a relatively small handful of thinkers associated with the Progressive and United Farmers movements then emerging in the West It was the thirties which under the impact of the depression witnessed the first real stirrings of careful economic analysis in cyclical terms and of statistical techniques for measuring the value of annual productive activity and income receipts in the Dominion The author has attempted to appraise the evolution of the Canadian policy of monetary and fiscal stabilization within the thought environment in which it was conceived and implemented and on the basis of the standards set by modern income employment theory      **Monetary Reform in Theory and Practice (Routledge Revivals)** Paul Einzig,2014-07-16 First published in 1936 this book gives the reader an insight into the tendencies and spirit of the monetary reform movement as a whole as accomplished or proposed since the First World War The author marks the consideration of the overall reform as being more important than specifically looking at the actual proposals and measures involved and the views he attributes to the various monetary reform schools are therefore composite views of the various factions of those schools As a comparatively recent convert to the idea of monetary reform at the time of writing the author offers a balanced view of the subject as he also has extensive experience of the ideas of the orthodox monetary system However he does not believe that monetary reform alone can achieve the desired end without considerable economic planning Indeed he suggests that the monetary reform movement he discusses desperately needs to adopt a broader perspective and thus he suggests a compromise      *The Capitalistic Cost-Benefit Structure of Money* Dieter Suhr,2012-12-06 This study is concerned with the time honored problem of the change that is induced when money enters into the economy As far back as Aristotle Politics pp 1135 1143 the still unanswered question regarding the dichotomy of the real exchange and the monetary economy was raised He contrasted Oeconomic where people strive to obtain real utilities

household management to Chrematistic where they use money to make more money art of wealth acquisition The true wealth consists of such values in use for the quantity of possession of this kind capable of making life pleasant is not unlimited There is however a second mode of acquiring things to which we may by preference and with correctness give the name of Chrematistic and in this case there appear to be no limits to riches and possessions Trade does not in its nature belong to Chrematistic for here the exchange has reference only to what is necessary to themselves In the case of Chrematistic circulation is the source of riches And it appears to revolve about money for money is the beginning and end of this kind of exchange Therefore also riches such as Chrematistic strives for are unlimited Oeconomic not Chrematistic has a limit the object of the former is something different from money of the latter the augmentation of money

**Contested Money** Matilde Massó,2023-10-02 Discussing money is always accompanied by controversy as well as enchantment Debating what money is and how it performs its main functions in the contemporary economy is fundamental to understanding the social consequences of money transformation associated with the digital revolution This book explores the links between the current and prospective properties of money its production and its relationship to the concepts of value the common good and innovation Contested Money opens a debate on the role that money could play in a different paradigm based on a renewed conception of monetary properties and functions that are capable of having a positive impact on social and individual welfare Mass outlines the fundamentals of this monetary model which would operate as a parallel currency where the processes of monetary and value creation are connected in a new deal between the citizen and the state grounded on an approach of reciprocal rights and responsibilities This book will appeal to scholars students and more broadly readers interested in a contemporary understanding of what money is how it is being transformed and the role that it can play in redefining the twenty first century social contract

**The Experiment in the History of Economics** Philippe

Fontaine, Robert Leonard, 2005-07-12 Throughout the history of economic ideas it has often been asserted that experimentation is impossible yet in fact history shows that the idea of experimentation has always been important and as such has been interpreted and put to use in many ways Rich in historical detail the essays in this topical volume deal with such issues as laboratory experimentation the observed transition from a post war economics to a contemporary discipline the contrasting positions of Friedrich Hayek and Oskar Morgenstern the socio economic experiments proposed by Ernest Solvay and Knut Wicksell and a rigorous examination of the way in which economic models can or cannot be construed as valid experiments producing useful knowledge A testament to the variety of ways in which experimentation has been of importance in the creation of economic knowledge these wide ranging essays will interest those seeking to expand their historical understanding of the discipline be they theorists historians philosophers advanced students or researchers
