Monitoring Government:

Monitoring Government Paul C. Light, 2011-02-01 Until the Department of Housing and Urban Development scandal in 1989 the public knew little about federal inspectors general IGs Suddenly Congress the press and the public were seeking answers to a scandal that challenged the role of the IGs in ensuring government accountability Within days the IGs were front page news and greater emphasis was placed on fraud waste and abuse as a measure of whether government could be held accountable Monitoring Government offers the first systematic evaluation of the offices of inspector general OIGs and examines the government wide investment in the IG concept Despite their increasingly prominent often controversial role in the internal oversight of government very little is known about their institutional or operational problems To some in the executive branch OIGs exercise too much discretion at the expense of executive control To others in Congress they do not have enough autonomy and responsibility Overall the question is not only how the OIGs have functioned but also what role they soundly play in our system of separation of powers Paul Light begins with a brief history of the IG concept from the passage of the 1978 IG Act to the changes in mission with new administrations He explains the different approaches to accountability discusses the nature of monitoring the political incentives surrounding findings and recommendations made by IGs and looks at the dominance of compliance monitoring as the front line against fraud waste and abuse The book addresses a number of specific issues regarding the policing of government Using detailed interviews with past IGs and senior level officials across government as well as a case study of the Housing and Urban Development scandal Lights examines a series of specific operational issues Envisioning a broader role for the IG in the future he offers recommendations to strengthen the search for accountability

Great Britain. Parliament. House of Commons. Committee of Public Accounts,2015 It is staggering that the government has given over 40 million to Kids Company over the past 13 years and still has no idea what it was getting for taxpayers money It was not part of this inquiry to assess the outcomes of Kids Company s work We object to the obvious unfairness of central government directly funding a charity which operated in only two London boroughs for most of its existence with around 4 million a year at the expense of other charities and young people across the country Despite repeated warnings and concerns about Kids Company s financial situation and the impact it was achieving funding to the charity continued and was never seriously questioned let alone stopped Instead responsibilities were passed between departments like a hot potato All the warning signs of a failed and expensive experiment had long been there but it was not until June 2015 that officials finally stood up to ministers said enough was enough and sought ministerial direction before providing more money By then it was too late *Public Administration in East Asia* Evan M. Seeds, Science, and Struggle Abby Kinchy,2012-07-20 An examination of how advocates for alternative agriculture confront science based regulation of genetically engineered crops Genetic engineering has a wide range of cultural economic and ethical implications yet it has become almost an article of faith that regulatory decisions about biotechnology be based only on evidence of specific quantifiable risks to consider anything else is said to politicize regulation In this study of social protest against genetically engineered food Abby Kinchy turns the conventional argument on its head Rather than consider politicization of the regulatory system she takes a close look at the scientization of public debate about the contamination of crops resulting from pollen drift and seed mixing Advocates of alternative agriculture confront the scientization of this debate by calling on international experts carrying out their own research questioning regulatory science in court building alternative markets and demanding that their governments consider the social and economic impacts of the new technologies Kinchy focuses on social conflicts over canola in Canada and maize in Mexico drawing out their linkages to the global food system and international environmental governance The book ultimately demonstrates the shortcomings of dominant models of scientific risk governance which marginalize
