Mindreading Animals Robert W. Lurz,2011-07-29 A comprehensive examination of a hotly debated question proposes a new model for mindreading in animals and a new experimental approach Animals live in a world of other minds human and nonhuman and their well being and survival often depends on what is going on in the minds of these other creatures But do animals know that other creatures have minds And how would we know if they do In Mindreading Animals Robert Lurz offers a fresh approach to the hotly debated question of mental state attribution in nonhuman animals Some empirical researchers and philosophers claim that some animals are capable of anticipating other creatures behaviors by interpreting observable cues as signs of underlying mental states others claim that animals are merely clever behavior readers capable of using such cues to anticipate others behaviors without interpreting them as evidence of underlying mental states Lurz argues that neither position is compelling and proposes a way to move the debate and the field forward Lurz offers a bottom up model of mental state attribution that is built on cognitive abilities that animals are known to possess rather than on a preconceived view of the mind applicable to mindreading abilities in humans Lurz goes on to describe an innovative series of new experimental protocols for animal mindreading research that show in detail how various types of animals from apes to monkeys to ravens to dogs can be tested for perceptual state and belief

fables to fantastic folktales humans have been telling stories about animals animals who can talk feel think and make moral judgments just as we do for a very long time In contrast scientific studies of the mental lives of animals have professed to be investigating the nature of animal minds slowly cautiously objectively with no room for fanciful tales fables or myths But recently these folkloric and scientific traditions have merged in an unexpected and shocking way scientists have attempted to prove that at least some animal fables are actually true These interdisciplinary chapters examine how science has targeted the well known Aesop s fable The Crow and the Pitcher as their starting point They explore the ever growing set of experimental studies which purport to prove that crows possess an understanding of higher order concepts like weight mass and even Archimedes insight about the physics of water displacement The Aesop s Fable Paradigm explores how these scientific studies are doomed to accomplish little more than to mirror anthropomorphic representations of animals in human folklore and reveal that the problem of folkloric projection extends far beyond the Aesop s Fable Paradigm into every nook and cranny of research on animal cognition
