Monkeys And Apes And Their Relatives:

Monkeys and Apes and Their Relatives Barbara Taylor, 2002 Find out about our closest relatives in the animal kingdom See a baby marmoset hitching a ride on its mother's back how gibbons zoom through the trees and how a colobus monkey can sleep sitting up We explore the differences between a selection of monkeys and apes and some of their rare relatives such as lemurs

Ancestors in Our Genome Eugene E. Harris (Professor), 2015 In 2001 scientists were finally able to determine the full human genome sequence and with the discovery began a genomic voyage back in time Since then we have sequenced the full genomes of a number of mankind's primate relatives at a remarkable rate The genomes of the common chimpanzee 2005 and bonobo 2012 orangutan 2011 gorilla 2012 and macaque monkey 2007 have already been identified and the determination of other primate genomes is well underway Researchers are beginning to unravel our full genomic history comparing it with closely related species to answer age old questions about how and when we evolved For the first time we are finding our own ancestors in our genome and are thereby gleaning new information about our evolutionary past In *Ancestors in Our Genome* molecular anthropologist Eugene E Harris presents us with a complete and up to date account of the evolution of the human genome and our species Written from the perspective of population genetics and in simple terms the book traces human origins back to their source among our earliest human ancestors and explains many of the most intriguing questions that genome scientists are currently working to answer For example what does the high level of discordance among the gene trees of humans and the African great apes tell us about our respective separations from our common ancestor Was our separation from the apes fast or slow and when and why did it occur Where when and how did our modern species evolve How do we search across genomes to find the genomic underpinnings of our large and complex brains and language abilities How can we find the genomic bases for life at high altitudes for lactose tolerance resistance to disease and for our different skin pigmentations How and when did we interbreed with Neandertals and the recently discovered ancient Denisovans of Asia Harris draws upon extensive experience researching primate evolution in order to deliver a lively and thorough history of human evolution *Ancestors in Our Genome* is the most complete discussion of our current understanding of the human genome available

Jackie the Penguin Goes on Safari Alex Shaland, 2023-01-12 This is a story of a small South African penguin called Jackie who had a dream of visiting wild animals of Africa and learning about their looks behaviors and characters However being a bird who could not fly Jackie was terrified to meet the big compared to him scary and possibly dangerous inhabitants of the African savannah So his wish remained just a dream But one day Jackie's life changed when he met and instantly became friends with two world travelers Irene and Alex on the way to their first African safari Packed with educational facts about Africa and its animal inhabitants *Jackie the Penguin Goes on Safari* is told from the point of view of a little penguin called Jackie In this book filled with full color pictures and vivid descriptions of African wildlife kids will learn how relying on true friends helped Jackie overcome his fears and anxieties and realize his life's dream

Biology: Threads of Life Sobrasua Ibim, 2010-07-30 Threads of Life is the story of living organisms and their components evolution diversity and interactions with the environment Threads of Life discusses the organisms their common threads or molecules and how these threads promote the evolution of biologically diverse organisms The evolution of organisms occurs through the processes of natural selection or the environmental influences which define how these organisms exist The main idea expressed throughout this manuscript is the presence of common threads that connect all organisms even in diversity These common threads of life that are fundamental in all organisms include cell DNA RNA chemicals food web and many others

The World from Beginnings to 4000 BCE Ian Tattersall, 2008-02-01 To be human is to be curious And one of the things we are most curious about is how we came to be who we are how we evolved over millions of years to become creatures capable of inquiring into our own evolution In this lively and readable introduction renowned anthropologist Ian Tattersall thoroughly examines both fossil and archaeological records to trace human evolution from the earliest beginnings of our zoological family Hominidae through the appearance of Homo sapiens to the Agricultural Revolution He begins with an accessible overview of evolutionary theory and then explores the major turning points in human evolution the emergence of the genus Homo the advantages of bipedalism the birth of the big brain and symbolic thinking Paleolithic and Neolithic tool making and finally the enormously consequential shift from hunter gatherer to agricultural societies 10 000 years ago Focusing particularly on the pattern of events and innovations in human biological and cultural evolution Tattersall offers illuminating commentary on a wide range of topics including the earliest known artistic expressions ancient burial rites the beginnings of language the likely causes of Neanderthal extinction the relationship between agriculture and Christianity and the still unsolved mysteries of human consciousness Complemented by a wealth of illustrations and written with the grace and accessibility for which Tattersall is widely admired *The World from Beginnings to 4000 BCE* invites us to take a closer look at the strange and distant beings who over the course of millions of years would become us [Educational Films](#), 1973

A (Very) Short History of Life on Earth Henry Gee, 2021-11-09 The Royal Society's Science Book of the Year A n exuberant romp through evolution like a modern day Willy Wonka of genetic space Gee's grand tour enthusiastically details the narrative underlying life's erratic and often whimsical exploration of biological form and function Adrian Woolfson The Washington Post In the tradition of Richard Dawkins Bill Bryson and Simon Winchester An entertaining and uniquely informed narration of Life's life story In the beginning Earth was

an inhospitably alien place in constant chemical flux covered with churning seas crafting its landscape through incessant volcanic eruptions Amid all this tumult and disaster life began The earliest living things were no more than membranes stretched across microscopic gaps in rocks where boiling hot jets of mineral rich water gushed out from cracks in the ocean floor Although these membranes were leaky the environment within them became different from the raging maelstrom beyond These havens of order slowly refined the generation of energy using it to form membrane bound bubbles that were mostly faithful copies of their parents a foamy lather of soap bubble cells standing as tiny clenched fists defiant against the lifeless world Life on this planet has continued in much the same way for millennia adapting to literally every conceivable setback that living organisms could encounter and thriving from these humblest beginnings to the thrilling and unlikely story of ourselves In A Very Short History of Life on Earth Henry Gee zips through the last 4.6 billion years with infectious enthusiasm and intellectual rigor Drawing on the very latest scientific understanding and writing in a clear accessible style he tells an enlightening tale of survival and persistence that illuminates the delicate balance within which life has always existed
