**Monoclonal Antibodies** Barton Haynes, 2012-12-02 Monoclonal Antibodies Probes for the Study of Autoimmunity and Immunodeficiency focuses on the research studies using monoclonal antibodies in two major classes of diseases which are autoimmunity and immunodeficiency The book comprises of 14 chapters each is written in detail and includes studies using monoclonal antibodies of the pathogenesis and treatment of various types of diseases of disordered immunity The first chapter presents an overview of the use of monoclonal antibodies in the study of autoimmunity and immunodeficiency The following chapters focus on other monoclonal reagents and their uses and applications to different diseases The last four chapters discuss specific classic endocrine diseases in reference to discoveries regarding the beginning of autoimmune mechanisms and pathophysiology Because the book is technically written students with background in biology microbiology and biochemistry are most likely the target audience of this book Other parties in the fields of immunology clinical medicine pathology and physiology will also find this book a good reference material Monoclonal Antibodies, Probes for the Study of Autoimmunity and Immunodeficiency Barton F. Peskar, 2012-12-06 Thirty years have elapsed since the first description by S A BERSON and R S YALOW of the basic principles of radioimmunoassay RIA During this period of time RIA methodology has been instrumental to the growth of many areas of biomedical research including endocrinology oncology hematology and pharmacology It has done so by providing a relatively simple universal tool allowing for the first time the detection of endogenous mediators that are present in body fluids at concentrations as low as  $10^{-10}$  M The fundamental nature of this discovery and the wide ranging fall out of basic and clinical knowledge derived from its application have been acknowledged by the many honors tributed to its pioneers including the Nobel Prize awarded to Dr YALOW 10 years ago Although several excellent books have been published during the past decades covering various aspects of RIA methodology we felt the need as pharmacologists for a comprehensive discussion of the methodological and conceptual issues related to the main classes of mediators of drug action and to drugs themselves Thus we gladly accepted the challenge provided by the invitation to edit a volume of the Handbook of Experimental Pharmacology on Radioimmunoassay in Basic and Clinical Pharmacology We tried to balance the emphasis placed on more general aspects of the RIA methodology and that on specific mediators *Ganglioside Structure, Function, and Biomedical Potential* Robert W. Ledeen, 2012-12-06 This volume contains

the proceedings of the symposium on Ganglioside Structure Function and Biomedical Potential which was held at Parksville Vancouver Island B C Canada on July 6 10 1983 The symposium was organized as a satellite to the ninth meeting of the International Society for Neurochemistry held immediately afterward in Vancouver City B C Close to 50 speakers from 9 countries presented papers on a wide range of topics on the ganglioside theme These encompassed the many aspects of basic research that have evolved over the past half century as well as some newer topics relating to the biomedical potential of gangliosides as therapeutic agents One of the purposes of the meeting was to encourage dialogue between investigators in these seemingly diverse areas in the hope that each would come away with fresh perspective toward his own work Judging from the many spirited informed discussions that took place throughout the four day meeting this goal was achieved The charm and beauty of Vancouver Island undoubtedly contributed to the congenial atmosphere which quickly developed among the 120 or so participants Drawn from 13 countries of Europe East and West America North and South Asia and the Middle East this gathering reflected the broad geographical scale on which ganglioside research is now conducted That this field is still in its logarithmic stage of growth is indicated by the increasing number of citations appearing each year in the various abstracts e g fig next page

Autoimmunity and the Pathogenesis of Diabetes Fredda Ginsberg-Fellner, Robert C. McEvoy, 2012-12-06 It has been a challenge for us to edit this volume of Endocrinology and Metabolism Progress in Research and Clinical Practice The topic of the pathogenesis of insulin dependent type I diabetes mellitus is particularly appropriate for this series since advances in this area have been made to a large extent by applying state of the art laboratory techniques to clinical samples Over the last several years a number of lines of evidence have been gathered suggesting that classic type I diabetes mellitus results from the autoimmune destruction of pancreatic beta cells in

genetically susceptible individuals This hypothesis is particularly appealing because it offers a rational approach to the prevention of diabetes by immunosuppression We have tried to present a balanced authoritative summary of the information currently available to support the autoimmune hypothesis for the pathogenesis of human type I diabetes to place this information in historical perspective to include relevant information from animal models of type I diabetes in which more invasive experimentation is ethical and finally to update the reader on the current status of attempts to intervene in the progression of diabetes with immunosuppressive drugs New York New York Fredda Ginsberg Fellner Robert C McEvoy Contents Preface v Contributors XI 1 The Autoimmune Hypothesis of Insulin Dependent Diabetes 1965 to the Present

McGregor,2012-12-06 Nineteen eighty six is a most appropriate year in which to be writing about developments in the organ specific autoimmune endocrine diseases It celebrates the

publication 30 years ago in 1956 of the classic papers of Roitt and Doniach and their co workers 1 and of Rose and Witebsky<sup>2</sup> and Adams<sup>3</sup> and Purves These three sets of fundamental observations provided the initial building blocks upon which much of what has been established in the field in the last 30 years was built No publication of this nature on endocrine autoimmune disease can cover every aspect of the subject I have chosen to highlight the organs thyroid and pancreas which have attracted the most attention and the areas of work within these fields within which most research effort is currently focused There are still some gaps the insulin and TSH receptors are not considered nor in any detail are the role of cytotoxic mechanisms in mediating gland destruction Molecular biology will undoubtedly in the next few years clarify once and for all the controversy that surrounds the structure of the TSH receptor and T cell cloning the role of cell mediated cytotoxicity The pathogenetic mechanisms underlying autoimmunity are increasingly well understood and the search for the aetiology has begun

**Ion Channel Reconstitution** C. Miller, 2013-11-09 It is now over 30 years since the idea of ion conducting pores burst on the electrophysiological scene 15 years since these were generally realized to be membrane spanning proteins and 10 years since the first observations of single ion channels from higher organisms were made During the past 5 years several integral membrane channel proteins have been purified in a functionally competent state the nicotinic acetylcholine receptor the Na channel mitochondrial VDAC and a variety of porins The stage is thus set to attack ion

channels in the same ways that biochemists have been attacking enzymes for decades isolation followed by functional analysis in as simple a system as possible with a view towards understanding the molecular mechanisms of the protein's behavior and how this is related to the underlying molecular structure This is always a daunting task all the more so with ion channels because of our still primitive and scanty understanding of channel structures and because of the difficulty in isolating functionally active channel proteins In this volume which can be considered a biochemically slanted companion to Sakmann and Neher's *Single Channel Recording* I have tried to present a view of the current landscape of ion channel reconstitution These chapters illustrate not only the different approaches and techniques of the major practitioners of ion channel reconstitution but as importantly the varied motivations for doing this kind of work

Pinchera, 2012-12-06 In 1956 three groups independently reported evidence that some thyroid disease appearing spontaneously in humans or experimentally induced in animals are related to autoimmune processes The interval between these landmark discoveries and the present has witnessed a remarkable and continuing growth of both knowledge and concepts concerning the mechanisms of immune regulation the pathogenesis of autoimmune thyroid diseases and their clinical and laboratory manifestations More importantly knowledge of thyroid autoimmunity has in many respects comprised the vanguard of an ever increasing appreciation and understanding of autoimmune diseases in general On November 24-26 1986 an International Symposium on Thyroid Autoimmunity was held in Pisa Its purpose was to commemorate the birth of thyroid autoimmunity as a scientific discipline to summarize current knowledge and concepts in this area and where possible to anticipate areas of opportunity for the future hence the theme of the Symposium Memories and Perspectives To open the meeting the Magnifico Rettore Chancellor of the University of Pisa granted special Awards to Dr Deborah Doniach Dr Ivan Roitt and Dr Noel R Rose who published the first fundamental studies in the field of thyroid autoimmunity and to Dr Duncan G Adams whose discovery of the long acting thyroid stimulator LATS opened the door to our current understanding of the pathogenesis of Graves disease During the meeting thirty plenary lectures were presented
