**Myocardial and Skeletal Muscle Bioenergetics** Nachman Brautbar, 2013-03-08      **Myocardial and Skeletal Muscle Bioenergetics** Nachman Brautbar, 1986-06-30      **Cardiac Energetics** R. Jacob, Hanjoerg Just, C. Holubarsch, 2013-04-17 Assessment of cardiac energetics at the level of ATP synthesis chemomechanical energy transformation and whole organ dynamics as a function of haemodynamic load ventricular configuration and oxygen and substrates supply is basic to understanding cardiac function under physiological and pathophysiological hypertrophy hypoxia ischaemia and heart failure conditions Moreover cardiac energetics should be an important consideration in the choice and application of drugs especially in the case of vasodilators inotropic agents and in cardioprotective measures Only by considering energetics at the subcellular cellular and whole heart level we can arrive at a better understanding of cardiac performance and ultimately better clinical judgement and drug therapy Quantification of myocardial energetics will also help to determine the optimal time for surgical interventions such as valvular replacement or aneurysm resection The present volume is the outcome of an international symposium on cardiac energetics held in Gargellen Montafon Austria June 1986 The contributions will certainly help bridge the existing gap between basic research involving isolated structures and that involving the whole organ on the one hand and render the results derived from basic research applicable to clinical problems on the other hand      *Malignant Hyperthermia* S. Saks, Renée Ventura-Clapier, 2012-12-06 Most of the information on the functional role structure and molecular biology of creatine kinase is scattered in several hundreds of publications The editors of this volume invited all authors who are most active at present in experimental research on creatine kinases to summarize their work and make the information easily

available to a wider scientific audience especially to young investigators who are entering this field Since the functional role of coupled creatine kinases is directly related to the phenomenon of compartmentation and structural organization of metabolic networks we also invited experts in the related areas to contribute to the volume Almost all invited authors responded enthusiastically and the results of this collective work are presented here For biochemists biophysicists physiologists and medical research workers      **Research Awards Index** ,1988      *Hemodynamics in Daily Practice* R. Stroobandt,2012-12-06 This book is an edited compilation of the scientific presentations given at a symposium on cardiovascular hemodynamics and the contemporary practice of cardiology which was organized in Malta April 1989 The field of cardio vascular medicine has undergone an extraordinary explosion of knowledge regarding the basic biology of the heart and circulation in health and disease as well as technologic innovations for probing and assessing cardiac geometry and physiology This edition addresses such issues which are key problems in current management of patients with heart disease For example the classic notion that severe myocardial ischemia is invariably followed by either recovery of normal function or the progression to cell death has been challenged by experimental studies and clinical observations of patients undergoing thrombolysis and revascularization This growing body of observations clearly indicates that the consequences of ischemia and reperfusion are much more complex and variable and include several states of abnormal metabolism and contractile function which are distinct from either health or death This book presents current issues of both consensus and controversy regarding the effects of myocardial ischemia and reperfusion including irreversible cell loss infarction myocardial stunning and myocardial hibernation Particular attention is paid to the assessment and differentiation of such patients in the coronary care unit catheterization suite or following surgical revascularization Secondly this book addresses the hemodynamic evaluation of the patient with valvular heart disease in today's cardiology practice      **Heart Failure** José Marín-García,2010-06-23 Heart Failure HF is the final and common pathway of all cardiovascular diseases Heart Failure Bench to Bedside helps address a significant need to develop new paradigms and to identify novel therapeutic targets for this pervasive disease An authoritative contribution to the field this book provides a detailed description of new findings and emerging methodologies as well as a critical clinical evaluation of the complex HF syndrome and future therapies Heart Failure Bench to Bedside includes a primer on gene profiling and bioenergetics of the normal heart and a discussion of the molecular genetic biochemical and cellular techniques critical to understanding HF Further chapters discuss cardiac remodeling oxidative stress and alterations in other organs and systems that are often associated with HF This book thoughtfully evaluates current and forthcoming diagnostic techniques and therapies pharmaceutical and pharmacogenomic based individualized medicine gene and cell based therapies and the search for new frontiers Heart Failure Bench to Bedside presents a clear view of up to date approaches to clinical diagnosis and treatment as well as offering insightful critiques of original and creative scientific thoughts on post genomic HF research      **Cardiovascular Magnetic Resonance E-Book**
