

Communities learn and change their cognitive properties in the same way that individuals do: not by understanding and altering the overall design of the social cognitive system, but with local tinkering and adaptations that Hutchins calls "evolution" of a cognitive system (in an analogy to biological evolution by random variations and natural selection).

- (3) *Culture and cognition are not separable.* Culture determines the details of how a cognitive task is represented and implemented. Polynesian and Western navigation are computationally equivalent (in the region of Polynesia); they represent and implement the task differently because the cultures are different. When cognition is embodied (and not thought of as explicit formal symbol manipulation, or as bounded by the skull), the traditional methods for bifurcating processes into cultural/cognitive are no longer available. Hutchins is implicitly criticizing not only those who think cognition is formal symbol manipulation within the brain, but also those (such as Latour, on some readings) whose theories ignore what happens in the brain and attend only to outside processes, mistakenly thinking of these as the locus of culture.

Hutchins' originality is not in the theoretical ideas themselves (most of them are to be found distributed in the work of pragmatists such as Dewey, James, and Polanyi, social epistemologists such as Goldman, Philip Kitcher, and Thagard, sociologists of science and actor-network theorists such as Latour, unconventional psychologists such as Vygotsky, and AI researchers in the distributed cognition and artificial life communities), but in the combination and thorough employment of these ideas in a new real world context (military navigation) and with a new analytic tool to understand group information processing (the neural networks of cognitive science).

I have a few critical reflections on *Cognition in the Wild*. The first is that the crucial feature of successful cognition—bringing mediating structures "into coordination with one another" is left, conspicuously, untheorized and vague. The relation of "coordination" may be one of functional resemblance; Thagard and Holyoak's recent work on analogy might provide the necessary architecture for modeling the relation.

Secondly, *Cognition in the Wild* focuses on a single domain, navigation on the *Palau*. Hutchins does not consider whether or how the ideas might be extended to other domains. There are reasons to suspect that such extension would not be straightforward. For example, the domains of scientific reasoning may be domains where consensus (especially speedy consensus) is not important, and where there is not a single, easily measurable kind of successful outcome (success in science is often not as simple as an accurate position fix). Nevertheless, extension of the ideas is potentially fruitful: for example, Hutchins' claims that social cognition can often be more robust and malleable (because expertise is both distributed and overlapping) and more successful (because of better ways of achieving consensus) might lead to some new normative suggestions for scientific practice.

Even within the domain of *Palau* navigation, there is focus on a subset of relevant cognitive processes. The simulation of group decision making using neural nets left out even more relevant processes. Conspicuously absent from the analysis of the case study is "hot cognition" (motivated reasoning) and cognitive biases (other than confirmation bias). So, Hutchins' work is closer to traditional views than he perhaps would like it to be.

These reservations aside, *Cognition in the Wild* has more than enough genuine interdisciplinarity, insight, and wit to engage academics across the whole range of science studies, as well as epistemology, cognitive science, decision sciences, and organizational behavior. The ideas in it have the potential to be extended and tested in new domains. It deserves serious attention. *Miriam Solomon, Temple University.*

Dissecting the Social Peter Hedstrom, 2005-11-10 Over the past few decades serious reservations have

been expressed about the explanatory power of sociological theory and research. In this important book leading social theorist Peter Hedström outlines the foundations of an analytically oriented sociology that seeks to address this criticism. Building on his earlier influential contributions to contemporary debates, Professor Hedström argues for a systematic development of sociological theory so that it has the explanatory power and precision to inform sociological research and understanding. He discusses various mechanisms of action and interaction and shows how strong links can be forged between the micro and the macro and between theory and empirical research. Combining approaches to theory and methodology and using extensive examples to illustrate how they might be applied, this clear, concise and original book will appeal to a broad range of social scientists.

Understanding Psychology as a Science Zoltan Dienes, 2008-02-28 How can we objectively define categories of truth in scientific thinking? How can we reliably measure the results of research? In this ground-breaking text, Dienes undertakes a comprehensive historical analysis of the dominant schools of thought, key theories and influential thinkers that have progressed the foundational principles and characteristics that typify scientific research methodology today. This book delivers a masterfully simple, though not simplistic, introduction to the core arguments surrounding Popper, Kuhn and Lakatos, Fisher and Royall, Neyman and Pearson and Bayes. Subsequently, this book clarifies the prevalent misconceptions that surround such theoretical perspectives in psychology today, providing an especially accessible critique for student readers. This book launches an informative inquiry into the methods by which psychologists throughout history have arrived at the conclusions of research, equipping readers with the knowledge to accurately design and evaluate their own research and gain confidence in critiquing results in psychology research. Particular attention is given to understanding methods of measuring the falsifiability of statements, probabilities and the differing views on statistical inference. An illuminating book for any undergraduate psychology student taking courses in critical thinking, research methods, BPS's core area, conceptual and historical issues, as well as those studying masters, PhDs and experienced researchers.

Science and the Decolonization of Social Theory Gennaro Ascione, 2016-08-12 This book addresses the ideological figure of modernity, its presumed historical significance as an era and its theoretical adequacy as a frame. It shows how science is evoked to prevent the sociological imagination from elaborating non-Eurocentric categories and terminologies that are more adequate for a global age. The idea of modernity should not only be contested but radically unthought in its foundational assumptions. These assumptions inform concepts such as secularization, emancipation, the global and accumulation of capital. This book frees these concepts from ethnocentrism and discloses a path toward a new non-Eurocentric global social theory. Gennaro Ascione explores the transformative potential of decolonizing knowledge through a radical reconsideration of the historical and epistemological role that the intellectual reference to science plays in the construction of concepts. This ground-breaking work challenges social theorists to think globally beyond modernity, bringing together social theory and science in an unprecedented way. Importantly, it makes accessible a new space of missing theorization for further developments and

inquiries in the field **Karl Popper, Science and Enlightenment** Nicholas Maxwell, 2017-09-26 Here is an idea that just might save the world It is that science properly understood provides us with the methodological key to the salvation of humanity A version of this idea can be found in the works of Karl Popper Famously Popper argued that science cannot verify theories but can only refute them and this is how science makes progress Scientists are forced to think up something better and it is this according to Popper that drives science forward But Nicholas Maxwell finds a flaw in this line of argument Physicists only ever accept theories that are unified theories that depict the same laws applying to the range of phenomena to which the theory applies even though many other empirically more successful disunified theories are always available This means that science makes a questionable assumption about the universe namely that all disunified theories are false Without some such presupposition as this the whole empirical method of science breaks down By proposing a new conception of scientific methodology which can be applied to all worthwhile human endeavours with problematic aims Maxwell argues for a revolution in academic inquiry to help humanity make progress towards a better more civilized and enlightened world

Economic Crisis and Economic Thought Tommaso Gabellini, Simone Gasperin, Alessio Moneta, 2019-01-23 The ongoing economic crisis has revealed fundamental problems both in our economic system and the discipline which analyses it This book presents a series of contrasting but complementary approaches in economic theory in order to offer a critical toolkit for examining the modern capitalist economy The global economic crisis may have changed the world in which we live but not the fundamental tenets of the discipline This book is a critical assessment of the relation between economic theory and economic crises how intellectual thinking impacts on real economic events and vice versa It aims at challenging the conventional way in which economics is taught in universities and later adopted by public officials in the policymaking process The contributions all written by distinguished academics and researchers offer a heterodox perspective on economic thinking and analysis Each chapter is inspired by alternative theoretical approaches which have been mostly sidelined from current academic teaching programmes A major suggestion of the book is that the recent economic crisis can be better understood by recovering such theoretical analyses and turning them into a useful framework for economic policymaking Economic Crisis and Economic Thought is intended as a companion to economics students at the Master's and PhD level in order for them to confront issues related to the labour market the financial sector macroeconomics industrial economics etc with an alternative and complementary perspective It challenges the way in which economic theory is currently taught and offered via alternatives for the future

Rhetoric and Argumentation in the Beginning of the XX Century Henrique Jales Ribeiro, 2009-12-01 This book is the edition of the Proceedings of the International Colloquium Rhetoric and Argumentation in the Beginning of the XXIst Century which was held at the Faculty of Letters of the University of Coimbra in October 24 2008 and was organized by Henrique Jales Ribeiro Joaquim Neves Vicente and Rui Alexandre Gracia The main purpose of the Colloquium was to commemorate the publication in 1958 of the books *La nouvelle rhétorique* *Traité de*

argumentation and *The Uses of Arguments* by respectively C Perelman L Olbrechts Tyteca and S Toulmin But another important goal was to take stock of the state of rhetoric and argumentation theory at the beginning of a new century It was a unique event without parallel in Portugal and worldwide considering its theme and its aims which gathered some of the World s most renowned rhetoric and argumentation theorists Alan Gross Douglas Walton Erik Krabbe Frans V Eemeren F Snoeck Henkemans Guy Haarscher John Anthony Blair Marianne Doury Oswald Ducrot Ruth Amossy The book includes a variety of very important contributions to rhetoric and argumentation theory ranging from those that naturally fall within the subject matter to the areas of philosophy linguistics communication theory education theory and law theory The art as it was called in the Medieval curricula is no longer a discipline amongst others and has become according to the view of some specialists and largely owing to Perelman and Toulmin influences a new paradigm of rationality for our age which auspiciously encompasses all fields of knowledge and culture The book is divided into five parts I Historical and philosophical studies on the influences of Perelman and Toulmin II Studies in argumentation theory III Linguistic approaches to argumentation theory IV Rhetoric and communication theory education theory approaches to argumentation and V Law theory approaches to argumentation

The Politics of Arab Authenticity Ahmad Agbaria, 2022-08-23 By the beginning of the 1970s the modernizing political and cultural movements that had dominated the postwar Arab world were collapsing The postcolonial project they had fashioned which sought to create a decolonized order and a new Arab man had suffered a shattering defeat in the wake of the Arab Israeli War in 1967 Disillusioned with modern ideologies that presented the past as a burden from which postcolonial societies must be liberated a growing number of Arab thinkers began to reconsider their cultural heritage *The Politics of Arab Authenticity* illuminates how Arab societies and their leading intellectuals responded to the collapse of the postcolonial project Ahmad Agbaria tells the story of a generation of postcolonial thinkers and activists who came to question their modernist commitments and biases against their own culture He explores the rise of a new class of postcolonial critics who challenged and eventually superseded the old guard of Arab nationalists Agbaria analyzes the heated cultural and intellectual debates that overtook the Arab world in the 1970s uncovering why major figures turned to tradition in search of solutions to postcolonial predicaments With balanced attention to cultural debates and intellectual biographies this book offers a nuanced understanding of major cultural trends in the contemporary Arab world

Popper and His Popular Critics Joseph Agassi, 2014-05-14 This volume examines Popper s philosophy by analyzing the criticism of his most popular critics Thomas Kuhn Paul Feyerabend and Imre Lakatos They all followed his rejection of the traditional view of science as inductive Starting from the assumption that Hume s criticism of induction is valid the book explores the central criticism and objections that these three critics have raised Their objections have met with great success are significant and deserve paraphrase One also may consider them reasonable protests against Popper s high standards rather than fundamental criticisms of his philosophy The book starts out with a preliminary discussion of some central background

material and essentials of Popper's philosophy. It ends with nutshell representations of the philosophies of Popper, Kuhn, Feyerabend and Lakatos. The middle section of the book presents the connection between these philosophers and explains what their central ideas consist of, what the critical arguments are, how they presented them and how valid they are. In the process, the author claims that Popper's popular critics used arguments that he had invented and answered without saying so. They differ from him mainly in that they demanded of all criticism that it should be constructive, do not stop believing a refuted theory unless there is a better alternative to it. Popper hardly ever discussed belief delegating its study to psychology proper; he usually discussed only objective knowledge, knowledge that is public and thus open to public scrutiny.

Popper and Economic Methodology Thomas Boylan, Paschal O'Gorman, 2007-09-11. This new book, under the impressive editorship of Thomas Boylan and Paschal O'Gorman, explores a number of major themes central to the work of Karl Popper. The tensions that have resulted from Popperian thought are well documented. How can mainstream orthodox economics be falsifiable while privileging its core of rationality as unquestionable? This book includes expert contributions from thinkers such as Tony Lawson, K. Vela Velupillai and John McCall, who discuss this issue with renewed academic rigour.

Science and the Precautionary Principle in International Courts and Tribunals Caroline E. Foster, 2011-03-24. By canvassing a range of international scientific disputes, including the EC Biotech and EC Hormones disputes in the WTO, the case concerning Pulp Mills and the Gabčíkovo-Nagymaros case in the International Court of Justice, and the Mox Plant and Land Reclamation cases dealt with under the United Nations Convention on the Law of the Sea, Caroline Foster examines how the precautionary principle can be accommodated within the rules about proof and evidence and advises on the boundary emerging between the roles of experts and tribunals. A new form of reassessment proceedings for use in exceptional cases is proposed. Breaking new ground, this book seeks to advance international adjudicatory practice by contextualising developments in the taking of expert evidence and analysing the justification of and potential techniques for a precautionary reversal of the burden of proof, as well as methods for dealing with important scientific discoveries subsequent to judgements and awards.

Philosophical Perceptions on Logic and Order Horne, Jeremy, 2017-05-19. Strong reasoning skills are an important aspect to cultivate in life as they directly impact decision making on a daily basis. By examining the different ways the world views logic and order, new methods and techniques can be employed to help expand on this skill further in the future. *Philosophical Perceptions on Logic and Order* is a pivotal scholarly resource that discusses the evolution of logical reasoning and future applications for these types of processes. Highlighting relevant topics including logic patterns, deductive logic and inductive logic, this publication is an ideal reference source for academicians, students and researchers that would like to expand their understanding of how society currently employs the use of logical reasoning techniques.
