Population Growth: Anthropological Implications

edited by
Brian Spooner

...the world's population is growing at an alarming rate, and the implications for the future are staggering. This book, edited by Brian Spooner, is a collection of essays that explore the anthropological implications of population growth. The essays are written by leading experts in the field, and they provide a comprehensive overview of the current state of research on this topic. The book is divided into three main sections: the first section deals with the historical context of population growth, the second section deals with the current state of the world's population, and the third section deals with the future implications of population growth. The book is a valuable resource for anyone interested in the field of population studies.

Population Growth Anthropological Implications:

Population Growth: Anthropological Implications University of Pennsylvania. Near East Center, University of Pennsylvania. University Museum, University of Pennsylvania. Department of Anthropology, 1972 The essays collected in this book explore a new and important field of study the interrelationship between population growth and decline and changes in technology culture and social organization They were generated by a discussion of Ester Boserup's anti Malthusian theory that the increased pressures of population on resources triggered evolutionary changes in the technology culture and social organization of historical agricultural societies Each author has reacted to the Boserup Model both in terms of his own sets of data and his personal theoretical inclinations yet a common theme emerges that changes in population pressure are a sometimes gentle sometimes compelling but ever present force in history and society Chapters are arranged according to the types of data they present The first half of the book deals with agriculture as a subsistence base while the second half treats broader problems of cultural change or intensification in the context of technological diversity The book itself is based on a conference Population Resources and Technology which was organized by anthropology professor Brian Spooner and held at the University of Pennsylvania in 1970 Contents The Evolution of Early Agriculture and Culture in Greater Mesopotamia A Trial Model Philip E L Smith and T Cuyler Young Jr Demography and the Urban Revolution in Lowland Mesopotamia Robert McC Adams From Autonomous Villages to the State a Numerical Estimation Robert L Carneiro A Regional Population in Egypt to circa 600 B C David O Connor Population Agricultural History and Societal Evolution in Mesoamerica William T Sanders Plow and Population in Temperate Europe Bernard Wailes Some Aspects of Agriculture in Taita Alfred Harris Farm Labor and the Evolution of Food Production Bennet Bronson Sacred Power and Centralization Aspects of Political Adaptation in Africa Robert McC Netting The Iranian Deserts Brian Spooner Demographic Aspects of Tibetan Nomadic Pastoralism Robert B Ekvall Population Growth and Political Centralization Don E Dumond Prehistoric Population Growth and Subsistence Change in Eskimo Alaska Don E Dumond Population Growth and the Beginnings of Sedentary Life among the Kung Bushmen Richard B Lee The Intensification of Social Life among the Kung Bushmen Richard B Lee Biological Factors in Population Control Solomon H Katz The Viewpoint of Historical Demography John D Durand **Population Growth** Brian Spooner, 1970 Population Growth Brian Spooner, 1972 Anthropologie Bevölkerungsentwicklung **Anthropological Demography** David I. revolution was not fully realized until quite late in the PPN and later in the Pottery Neolithic PN period We would like to ask some questions and comment on a few aspects emphasizing the linkage between biological and cultural developments during the Neolithic Revolution The biological issues addressed in this chapter are as follows Is there a demographic change from the Natu an to the Neolithic Is there a change in the overall health of the Neolithic populations compared to the Natu an Is there a change in the diet and how is it expressed Is there a change in the physical burden stress people had to bear with Is there a change in intra and inter community rates of violent encounters From the cultural perspective the leading questions will be What was the change in the economy and when was it fully realized Is there a change in settlement patterns and site nature and organization from Natu an to Neolithic Is there a change in human activities and division of labor

Population and Development in Poor Countries Julian Lincoln Simon, 2014-07-14 Making the case that population growth does not hinder economic progress and that it eventually raises standards of living Julian Simon became one of the most controversial figures in economics during the past decade This book gathers a set of articles theoretical empirical and policy analyses written over the past twenty years which examine the effects of population increase on various aspects of economic development in less developed economies The studies show that within a century or even a quarter of a century the positive benefits of additional people counterbalance the short run costs The process is as follows increased numbers of consumers and the resultant increase of total income expand the demand for raw materials and finished products The resulting actual and expected shortages force up prices of the natural resources The increased prices trigger the search for new ways to satisfy the demand and sooner or later new sources and innovative substitutes are found These new discoveries lead to cheaper natural resources than existed before this process began leaving humanity better off than if the shortages had not appeared Originally published in 1992 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Global Population and Reproductive Health Deborah R. McFarlane, 2014-07-18 The world population surpassed the seven billion mark in 2011 yet many women and couples still lack access to reproductive health services These facts have profound implications for maternal and child health environmental quality and food security Global Population and Reproductive Health provides an introduction to an important and timely public health topic The text is unique in that it explores the inextricable link between population and reproductive health a connection that is often overlooked as well as their impact on global and local environmental issues Students will come away with a clear understanding of the relationships among all these issues and the vital need for integrated policies and international cooperation Contents Include 1 Overview 2 Measures and Theories 3 Health 4 Related Issues 5 Policies

The Anthropology of Complex Economic Systems Niccolo Leo Caldararo, 2013-11-14 Today we live in what Ulrich Beck has aptly characterized as a risk society shaped by intensifying crises outside of our control and seemingly outside of our comprehension. The master narrative that was supposed to lead us to secular salvation economics has proved to be a large part of the problem rather than the much anticipated solution. In *The Anthropology of Complex Economic Systems* Niccolo Caldararo offers a much more radical and challenging answer than the fundamental assumptions on which the modern science of economics has been erected are false and that it is through the medium of anthropology, particularly the relatively neglected field of economic anthropology, that an alternative and sound basis for both the understanding of economic behavior and for the shaping of economic futures can be constructed. Caldararo not only challenges the foundational assumptions of conventional economic theory but situates economic behavior something quite different and universal amongst human beings in both a historical and an ecological context. Contemporary discussions of sustainability, especially in the field of development studies, have oddly neglected to look to anthropology. Economic anthropology is the repository of a vast store of wisdom both about actual alternative and workable economic systems and about their evolution. By drawing on this source, Caldararo builds a model of the evolution of human economies which stir up substantial debate, shows how economic anthropology provides a tool for the interrogation of economic theory and ties economics to ecology. It has been the rupture of this fundamental relationship that lies at the basis of much of our present crisis and the unsustainable economic patterns that humans have created. By bringing together in a new configuration economic anthropology, ecology, and culture history, Caldararo not only proposes a new model of human social evolution but equally importantly creates a methodology for speaking to and against our present economic and environmental situation.

Advances in Archaeological Method and Theory Michael B. Schiffer, 2014-06-30 *Advances in Archaeological Method and Theory* Volume 1 presents the progressive explorations in methods and theory in archeology. This book discusses the strategy for appraising significance which is needed to maximize the preservation and wise use of cultural resources. Organized into 10 chapters, this volume begins with an overview of planning for the best long term use of cultural resources which is the essence of conservation archeology. This text then examines the importance of the concept in cultural ecological studies. Other chapters consider the methods used in determining the density, size, and growth rate of human populations. This book discusses as well the use of demographic variables in archeological explanation. The final chapter deals with the decisions that must be made in designing a survey and to identify the alternative consequences for data recovery of various strategies. This book is a valuable resource for archeologists and planners. Debating Oaxaca Archaeology Joyce Marcus, 1990-01-01 The essays in this collection examine a variety of topics within Oaxacan archaeology from settlement and land use to scale and complexity. They are based on papers presented at the 1987 meeting of the Northeast Mesoamericanists Society held at the University of Pennsylvania Museum in Philadelphia. Biodiversity and Landscapes Ke Chung Kim, Robert D.

Weaver,1994-08-26 Experts from different disciplines discuss the nature origin and possible solutions to the problem of landscape degradation and diminishing global biodiversity Current Developments in Anthropological Genetics James H. Mielke,2012-12-06 The papers in this volume were presented as part of the University of Kansas Department of Anthropology Distinguished Lecture Program on Anthro pological Genetics Consecutively each contributor spent approximately a week on the campus at Lawrence participating in a seminar The contributors to this volume were not on campus at one time but visited us on alternating weeks hence a symposium type interchange was not possible between all participants However the students and faculty of Kansas University acted as a sounding board This volume can be considered a companion and continuation of *Methods and Theories of Anthropological Genetics* which was based upon a symposium on the state of the art in 1971 This present volume reflects what we consider to be some of the advances and current developments in anthropological genetics since 1973 Emphasis has shifted to some degree away from population struc ture analysis as depicted in Crawford and Workman to genetic epidemiology However population structure still remains a fertile and ongoing area of research with many theoretical questions still remaining unanswered *Perspectives in Cultural Anthropology* Herbert A. Applebaum,1987-01-01 Designed as a reader for courses this anthology presents an array of theories and interpretations in the field of modern cultural anthropology It provides a deeper understanding of the major theoretical orientations which have historically guided and currently guide anthropological research The !Kung San Richard Borshay Lee,1979-12-12 For most of human history hunting and gathering was a universal way of life Richard Borshay Lee spent over three years conducting fieldwork among the Kung San an isolated population of 1 000 in northern Botswana When Lee began his work in 1963 the Kung San were one of the last of the world s people to live this life By 1973 when Lee last lived with the group it appeared that they Kung were a society on the threshold of a transformation that signalled the end of foraging as an independent way of life at least in Africa *The Kung San Men Women and Work in a Foraging Society* an ecological and historical study is Professor Lee s major statement on his research By maintaining simultaneous historical and synchronic perspectives Lee is able to extend his analysis of core features from the contemporary Kung to prehistoric societies These basic principles become the means to understanding the form of human life that has been obscured by the developments and complications of societies during the last few thousand years *Population Pressure and Cultural Adjustment* Virginia Deane Abernethy,2018-04-17 Integrating research from anthropology biology and history this provocative brilliant book proposes a theory of demographic equilibrium The author s hypothesis is that human beings like many other species are able to adjust their population numbers to the carrying capacity of the environment Abernethy points out that in response to perception of scarcity or abundance of resources culturally mediated values beliefs and behavioral patterns are modified in ways that can either raise or lower rates of population growth Abernethy in this way moves beyond the ideological debates that have sundered the field of policy and population In real world time and space cultural adjustments that balance

population and resources are made over a long stretch in relatively stable or known environments These adjustments also operate in processes that involve technological advances that appear to increase carrying capacity and these usually act to support and underwrite population growth in any given area In her new introduction to this first paperback edition Abernethy shows how many of the cultural changes the book predicted in 1979 have come to pass She details a complex of behaviors that favor single life styles or small family size that have contributed to low fertility rates among native born Americans while fertility rates among immigrants continue to climb Population Pressure and Cultural Adjustment is not simply a theoretical slogan but discusses a rich set of different cultural situations where this homeostatic process has been disrupted or aborted Often disruption occurs after the infusion of foreign value systems as well as new forms of technological innovation or when highly permeable social boundaries result in the importation of resources for which the limits and consequences are not fully appreciated by the host population This work will inevitably be controversial because of its implications for the limits as well as the potential of public policy in both advanced and underdeveloped societies

Life and Death in the Ancient City of Teotihuacan Rebecca Storey, 1992-01-30 Cities arose independently in both the Old World and in the pre Columbian New World Lacking written records many of these New World cities can be studied only through archaeology including the earliest pre Columbian city Teotihuacan Mexico one of the largest cities of its time 150 B C to A D 750 Thus an important question is how similar New World cities are to their Old World counterparts Storey s research shows clearly that although Teotihuacan was a very different environment and culture from 17th century London these two great cities are comparable in terms of health problems and similar death rates

Structure, Meaning and Ritual in the Narratives of the Southern San Roger Hewitt, 2008-08-01 Analyses texts drawn from the Bleek and Lloyd Archive arguably one of the most important collections for the understanding of South African cultural heritage and in particular the traditions of the Xam South Africa s first people Initially appearing in a now rare 1986 edition and here re issued for the first time the doctoral thesis on which the book is based became the catalyst for much scholarly research The book offers an analysis of the entire corpus of Xam narratives found in the Bleek and Lloyd collection focusing particularly on the cycle of narratives concerning the trickster Kaggen Mantis These are examined on three levels from the deep structures with resonances in other areas of Xam culture and supernatural belief through the recurring patterns of narrative composition apparent across the cycle and finally touching on the observable differences in the performances by the various Xam collaborators Hewitt s text remains the only comprehensive and detailed study of Xam narrative and it has become itself the object of study by researchers and PhD candidates in South Africa the United Kingdom Canada and elsewhere This new edition at last makes Hewitt s important work more widely available It will be a welcome addition to the recently burgeoning literature on the place of the Xam hunter gatherers in the complex history of South African culture and society

Transformations Colin Renfrew, Kenneth L. Cooke, 2014-05-10 Transformations Mathematical Approaches to Culture

Change focuses on the application of contemporary mathematical techniques to the study of culture change and formulates problems in archaeology anthropology and historiography in such a way that they are susceptible to treatment of a mathematical kind Mathematical models extending from the almost purely quantitative methods of physics to the purely verbal conceptual explanations are described Emphasis is placed on catastrophe theoretic models that exemplify the use of soft mathematics in situations in which the use of hard quantitative models is not possible Comprised of 21 chapters this book begins with an overview of the role of mathematics in theoretical archaeology followed by a discussion on two general categories of mathematical methods that seem to be suitable for modeling cultural transformations methods of dynamical systems theory and methods that give greater emphasis on discrete entities and the structural relations or patterns among them Subsequent chapters deal with the use of mathematics in history morphogenesis in biological and social systems simulation of the growth of hierarchies and logistic trends in Southwest population growth A reconstruction of political units in the Valley of Mexico during the Toltec period is also presented This monograph will be of interest to archaeologists anthropologists historians biologists sociologists and mathematicians *Demographic Transition Theory* John C. Caldwell, 2007-09-21 This book has a strong theoretical focus and is unique in addressing both mortality and fertility over the full span of human history It examines the demographic transition in the change in the human condition from high mortality and high fertility to low mortality and low fertility It asks if fluctuating populations is a new phenomenon or if there has long been an inherent tendency in Man to maximize survival and to control family size **Cultural Anthropology** Raymond Scupin, 2019-12-10 Cultural Anthropology A Global Perspective delves into both classic and current research in the field reflecting a commitment to anthropology's holistic and integrative approach This text illuminates how the four subfields of anthropology biological anthropology archaeology linguistics and cultural anthropology together yield a comprehensive understanding of humanity
