Population Resources And Development Riding The Age Waves Volume 1 Paperback:

Population, Resources and Development Shripad Tuljapurkar, Ian Pool, Vipan Prachuabmoh, 2005-07-22 In the 21st century the populations of the world's nations will display large and long lived changes in age structure. Many of these began with fertility change and are amplified by declining mortality and by migration within and between nations. Demography will matter in this century not by force of numbers but by the pressures of waves of age structural change. Many developing countries are in relatively early stages of fertility decline and will experience age waves for two or more generations. These waves create shifting flows of people into the key age groups greatly complicating the task of managing development from building human capabilities and creating jobs to growing industry infrastructure and institutions. In this book distinguished scientists examine key demographic, social, economic and policy aspects of age structural change in developing economies. This book provides a joint examination of dimensions of age structural change that have often been considered in isolation from each other for example education, job creation, land use, health. It uses case studies to examine policy consequences and options and develops qualitative and formal methods to analyze the dynamics and consequences of age structural change.

CEMAF as a Census Method David A. Swanson,Paula J. Walashek,2011-03-28 In

provocative terms that push the envelope of technical administrative and legal capabilities Swanson and Walashek propose a re vamped US census based neither on the current system self enumeration nor its predecessor door to door canvassing Instead they propose that it be built on a combination of four elements 1 administrative records 2 the continuously updated Master Address File 3 survey data and 4 modeling and imputation techniques They use Census Enhanced Master Address File CEMAF as a descriptive term for their proposal which is based on four principles and includes a proposal for an independent Census Bureau They argue that evidence suggests that the methods used to conduct traditional census counts may be at the end of their useful working lives as evidenced by increasing costs and declining response rates Some of their ideas will seem farfetched However Swanson and Walashek believe this is the time to discuss radical proposals as governments re examine the utility of traditional census counts and consider reductions as is the case in Canada and England This SpringerBriefs should be on the reading list of staff in statistical agencies grappling with rising costs and declining response rates as well as census stakeholders concerned about costs accuracy and census utility
