build a strong foundation to those working in both thermoplastic and thermosetting plastics. **Porosity of Ceramics** Roy W. Rice, 2017-12-19 Focuses on the effects of porosity and microcracking on the physical properties of ceramics particularly nominally single phase ceramics. The book elucidates the fundamental interrelationships determining the development and use of materials for actual and potential engineering needs. It aims to help in the understanding of porosity effects on other materials from ceramic composites, cements and plasters to rocks, metals and polymers. College or university bookshops may order five or more copies at a special student price available on request.

Advanced Structural and Functional Materials Design Yukichi Umakoshi, Shinji Fujimoto, 2006. The Industrial Revolution showed that the development and improvement of new materials and functions could bring about social change and benefit human society. However, one can be forgiven for feeling that more recent materials research, particularly in the domain of metals, has focused only upon individual elemental characteristics and narrow specialty fields and that the original vision of materials research has thus been lost.

Polymer Processing with Supercritical Fluids Vanessa Goodship, Erich Ogur, 2004. SCFs are currently the subjects of intense research and commercial interest. Applications such as the RESS rapid expansion of supercritical fluid solutions process are part of standard industrial practice. In view of their ever growing importance in the polymer industry, there is a need to fully comprehend how supercritical fluids interrelate with polymeric materials to realise the potential that can be gained from their use. The authors review the basic principles of SCFs and their application within the polymer industry: characteristics and properties, extraction of unwanted residual products, polymerisation, solvents and polymer impregnation. Processing applications such as plasticisation, foaming and blending are also considered. There is discussion of the potential within the polymer recycling industry for use of SCFs as cleaning agents or within supercritical oxidation processes. Around 400 references with abstracts from recent global literature accompany this review, sourced from the Polymer Library to facilitate further reading. A subject index and a company index are included.
