

Portable Unix

- First port beyond PDP-11 was to **Interdata 8/32** minicomputer
- Porting required:
 - write a C compiler for the new machine,
 - write device drivers for the new machine's I/O devices such as printers, terminals, disks
 - Small amount of machine-dependent code such as the interrupt handlers, memory management routines must be rewritten, usually in assembly code
- **Problem: Ritchie's compiler** – good, but produced PDP-11 object code.
 - **Steve Johnson** at Bell Labs implemented **portable C compiler**, called also Johnson's compiler
- **1984** – AT&T released UNIX as a commercial product, first System III, then **System V**.
