1987 The 1st Workshop was at Kansas State University Manhattan Kansas in April 1985 see LNCS 239 and the 2nd Workshop with a limited number of participants was at Kansas State in April 1986 It was the intention of the organizers that the 3rd Workshop survey as many areas of the Mathematical Foundations of Programming Language Semantics as reasonably possible The Workshop attracted 49 submitted papers from which 28 papers were chosen for presentation The papers ranged in subject from category theory and Lambda calculus to the structure theory of domains and power domains to implementation issues surrounding semantics

System Development and Ada A. Nico Habermann, Ugo Montanari, 1987-09-23 The collection of papers published in this book was initially presented at the Workshop on Software Factories and Ada held on Capri May 26 30 1986 The subject of the book is software development environments Software development is treated from three viewpoints methodologies language issues and mechanisms Of particular interest are the discussions of automation of the development process and the formalization of software development specifications Several new methodologies are described many of which are available on the commercial market New is in particular the formalization of the design and development process Interesting ideas are presented on planning the design process and on supporting project management by formal tools The reader will find a variety of interesting methodologies and mechanisms that are operational The book is suitable for readers interested in knowing in which direction programming environment research is moving

Trends, Techniques, and Problems in Theoretical Computer Science Alica Kelemenova, Jozef Kelemen, 1987-10-21 Aerodynamics and hydrodynamics are still the main domains that make greater use of flow visualization and classical optical techniques such as schlieren and interferometry than of more recent techniques such as holography speckle laser light sheets laser induced tracers and laser induced fluorescence A number of studies are now under way on turbulent and vortex flows within boundary layers or wakes in the mixing layer of two flows Other studies concern jets two phase flows and air water interface To review and discuss developments in flow visualization four international symposia have been held Following Tokyo Bochum and Ann Arbor the Fourth International Symposium on Flow Visualization ISFV 4 was held in Paris in August 1986

Graph-Grammars and Their Application to Computer Science Hartmut Ehrig, Manfred Nagl, Grzegorz Rozenberg, Azriel Rosenfeld, 1987-12-17 The generic term graph grammars refers to a variety of methods for specifying possibly infinite sets of graphs or sets of maps The area of graph grammars originated in the late 60s motivated by considerations concerning pattern recognition since then the list of areas which have interacted with the development of graph grammars has grown quite impressively It includes pattern recognition software specification and development VLSI layout schemes data bases lambda calculus analysis of concurrent systems massively parallel computer architectures incremental compilers computer animation complexity theory developmental biology music composition representation of physical solids and many others This volume is based on the contributions presented at the third international workshop on graph grammars and their applications held in Warrenton Virginia USA in December 1986 Aiming at the best possible

representation of the field not all of the papers presented at the meeting appear in this volume and some of the papers from this volume were not presented at the workshop The volume consists of two parts Part I presents tutorial introductions to a number of basic graph and map rewriting mechanisms Part II contains technical contributions This collection of papers provides the reader with an up to date overview of current trends in graph grammars

Foundations of Software Technology and Theoretical Computer Science Kesav V. Nori, 1987-11-25 This volume gives the proceedings of the Tenth Conference on Foundations of Software Technology and Theoretical Computer Science These conferences are organized and run by the computer science research community in India and their purpose is to provide a forum for professional interaction between members of this research community and their counterparts in different parts of the world The volume includes four invited papers on reasoning about linear constraints using parametric queries the parallel evaluation of classes of circuits a theory of commonsense visual reasoning natural language processing complexity theory and logic The 26 submitted papers are organized into sections on logic automata and formal languages theory of programming parallel algorithms geometric algorithms concurrency distributed computing and semantics

Parallel Computing in Science and Engineering Rüdiger Dierstein, Dieter Müller-Wichards, Hans-Martin Wacker, 1988-05-11 It was the aim of the conference to present issues in parallel computing to a community of potential engineering scientific users An overview of the state of the art in several important research areas is given by leading scientists in their field The classification question is taken up at various points ranging from parametric characterizations communication structure and memory distribution to control and execution schemes Central issues in multiprocessing hardware and operation such as scalability techniques of overcoming memory latency and synchronization overhead as well as fault tolerance of communication networks are discussed The problem of designing and debugging parallel programs in a user friendly environment is addressed and a number of program transformations for enhancing vectorization and parallelization in a variety of program situations are described Two different algorithmic techniques for the solution of certain classes of partial differential equations are discussed The properties of domain decomposition algorithms and their mapping onto a CRAY XMP type architecture are investigated and an overview is given of the merit of various approaches to exploiting the acceleration potential of multigrid methods Finally an abstract performance modeling technique for the behavior of applications on parallel and vector architectures is described

STACS 88 Robert Cori, Martin Wirsing, 1988-01-27 This volume contains the presentations of the Fifth Symposium on Theoretical Aspects of Computer Science STACS 88 held at the University of Bordeaux February 11 13 1988 In addition to papers presented in the regular program the volume contains abstracts of software systems demonstrations which were included in this conference series in order to show applications of research results in theoretical computer science The papers are grouped into the following thematic sections algorithms complexity formal languages rewriting systems and abstract data types graph grammars distributed algorithms geometrical algorithms trace languages semantics of parallelism
