National Academies to conduct a review of the BR Specifically NASA asked the committee to 1 conduct a comprehensive assessment and report of the strengths and weaknesses of the content and processes of the Bioastronautics Roadmap as applied to the missions described in the President s exploration initiative and 2 identify the unique challenges for accomplishing its goals and objectives In September 2004 the committee released its preliminary report to NASA entitled Preliminary Considerations Regarding NASA s Bioastronautics Critical Path Roadmap That document presented the committee s preliminary conclusions about the strengths and weaknesses of the April 2004 version of the BR This report A Risk Reductions Strategy for Human Exploration of Space builds on those preliminary conclusions and provides recommendations to NASA about how to address the issues identified by the committee

Psychology of Space Exploration: Contemporary Research in Historical Perspective Douglas A. Vakoch, National Aeronautics and Space Administration, 2011-07-06 This book explores some of the contributions of psychology to yesterday s great space race today s orbiter and International Space Station missions and tomorrow s journeys beyond Earth s orbit It provides an analysis of the challenges facing future space explorers while at the same time presenting new empirical research on topics ranging from simulation studies of commercial spaceflights to the psychological benefits of viewing Earth from space

Recapturing a Future for Space Exploration National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee for the Decadal Survey on Biological and Physical Sciences in Space, 2012-01-30 More than four decades have passed since a human first set foot on the Moon Great strides have been made in our understanding of what is required to support an enduring human presence in space as evidenced by progressively more advanced orbiting human outposts culminating in the current International Space Station ISS However of the more than 500 humans who have so far ventured into space most have gone only as far as near Earth orbit and none have traveled beyond the orbit of the Moon Achieving humans further progress into the solar system had proved far more difficult than imagined in the heady days of the Apollo missions but the potential rewards remain substantial During its more than 50 year history NASA s success in human space exploration has depended on the agency s ability to effectively address a wide range of biomedical engineering physical science and related obstacles an achievement made possible by NASA s strong and productive commitments to life and physical sciences research for human space exploration and by its use of human space exploration infrastructures for scientific discovery The Committee for the Decadal Survey of Biological and Physical Sciences acknowledges the many achievements of NASA which are all the more remarkable given budgetary challenges and changing directions within the agency In the past decade however a consequence of those challenges has been a life and physical sciences research program that was dramatically reduced in both scale and scope with the result that the agency is poorly positioned to take full advantage of the scientific opportunities offered by the now fully equipped and staffed ISS laboratory or to effectively pursue the scientific research needed to support the development

of advanced human exploration capabilities Although its review has left it deeply concerned about the current state of NASA's life and physical sciences research the Committee for the Decadal Survey on Biological and Physical Sciences in Space is nevertheless convinced that a focused science and engineering program can achieve successes that will bring the space community the U S public and policymakers to an understanding that we are ready for the next significant phase of human space exploration The goal of this report is to lay out steps and develop a forward looking portfolio of research that will provide the basis for recapturing the excitement and value of human spaceflight thereby enabling the U S space program to deliver on new exploration initiatives that serve the nation excite the public and place the United States again at the forefront of space exploration for the global good

A Constrained Space Exploration Technology Program National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Committee to Review NASA's Exploration Technology Development Program, 2009-01-29

In January 2004 President George W Bush announced the Vision for Space Exploration VSE which instructed NASA to Extend human presence across the solar system starting with a human return to the Moon by the year 2020 in preparation for human exploration of Mars and other destinations among other objectives As acknowledged in the VSE significant technology development will be necessary to accomplish the goals it articulates NASA's Exploration Technology Development Program ETDP is designed to support develop and ultimately provide the necessary technologies to meet the goals of the VSE This book a review of the ETDP is broadly supportive of the intent and goals of the VSE and finds the ETDP is making progress towards the stated goals of technology development However the ETDP is operating within significant constraints which limit its ability to successfully accomplish those goals the still dynamic nature of the Constellation Program requirements the constraints imposed by a limited budget the aggressive time scale of early technology deliverables and the desire to fully employ the NASA workforce

Psychology of Space Exploration: Contemporary Research in Historical Perspective Douglas A. Vakoch, National Aeronautics and Space Administration, 2012-01-27 Through essays on topics including survival in extreme environments and the multicultural dimensions of exploration readers will gain an understanding of the psychological challenges that have faced the space program since its earliest days An engaging read for those interested in space history and psychology alike this is a highly relevant read as we stand poised on the edge of a new era of spaceflight Each essay also explicitly addresses the history of the psychology of space exploration

Building a Space-Faring Civilization Michael Schmidt A, Marianne Legato J, 2025-02-03 Building a Space Faring Civilization Advancing the Renaissance of Science Medicine and Human Performance in Civilian Spaceflight explores an expanding unique new trajectory for humankind the

settlement of space by civilians For the first time in history average humans can contemplate journeys to Earth orbit the Moon and Mars with the idea of space settlement as a plausible reality As the numbers of spacefaring civilians grow medical personnel will be asked to meet their complex needs through an ever expanding discipline space medicine But this will require a rapidly advancing science to address what some are calling the next great age in space This book gathers some of the most accomplished thought leaders in the field of human spaceflight today Collectively they helped build the international space station ISS develop the field of orbital medicine guide the development of commercial orbital platforms plan missions to the Moon and Mars and forge the innovation necessary for the commercial spaceflight industry to thrive today The result is an exceptional source of wisdom experience and insight surrounding the current biomedical technical industrial legal and social implications of what is emerging as a true renaissance period in human history Describes the lessons learned from past explorers from the Renaissance to the present and how they can guide space exploration today Characterizes the risks encountered in the exploration and settlement of different domains of space Surveys the types of medical incidents civilian space travelers are likely to encounter based on professional astronaut reports Summarizes the types of biomedical assessment civilian space travelers will require in order to ready themselves for the dangers of space Explores the types of preparation training and medical countermeasures needed to live and work in space

Systems Medicine For Human Spaceflight Mark J Shelhamer,Erik Antonsen,2024-03-19 This edited volume makes the case that a systems approach is needed for long term spaceflight missions Due to distance from Earth and the impossibility of resupply or rapid return these flights will entail unprecedented autonomy on the part of the crew This autonomy includes the need for local clinical decision support and other assistance with urgent medical concerns The advantage of a systems approach to medical needs in human spaceflight is that it enables a systematic and repeatable methodology for identifying and developing the individual pieces of the spacecraft systems based on the human system needs that are unique to that problem and environment The book begins by introducing a systems basis for thinking about humans in space It describes existing models and paradigms of systems medicine as well as the tools and analytical approaches involved A tantalizing peek at preliminary applications of systems medicine in NASA is provided As systems in human spaceflight continue to evolve for the foreseeable future it is argued that a systems approach will help to ensure that the evolution of the relevant sub systems is centered on optimal human system function across the unique spaceflight needs of the developing customer base The discussions on balancing the needs of the mission versus the maintenance of crew health medical risk and liability for commercial spaceflights and the need to anticipate what the next medical issues might be will hopefully leave readers cautiously optimistic about this new frontier of applied science

On Orbit and Beyond Douglas A. Vakoch,2012-12-20 As we stand poised on the verge of a new era of spaceflight we must rethink every element including the human dimension This book explores some of the contributions of psychology to yesterday s great space race today s orbiter and International Space Station missions and tomorrow s journeys beyond Earth s orbit Early missions into space were typically brief and crews were small often

drawn from a single nation As international cooperation in space exploration has increased over the decades the challenges of communicating across cultural boundaries and dealing with interpersonal conflicts have become all the more important requiring different coping skills and sensibilities than the right stuff expected of early astronauts As astronauts travel to asteroids or establish a permanent colony on the Moon with the eventual goal of reaching Mars the duration of expeditions will increase markedly as will the psychosocial stresses Away from their home planet for extended times future spacefarers will need to be increasingly self sufficient while simultaneously dealing with the complexities of heterogeneous multicultural crews

On Orbit and Beyond Psychological Perspectives on Human Spaceflight the second considerably expanded edition of *Psychology of Space Exploration Contemporary Research in Historical Perspective* provides an analysis of these and other challenges facing future space explorers while at the same time presenting new empirical research on topics ranging from simulation studies of commercial spaceflights to the psychological benefits of viewing Earth from space This second edition includes an all new section exploring the challenges astronauts will encounter as they travel to asteroids Mars Saturn and the stars requiring an unprecedented level of autonomy Updated essays discuss the increasingly important role of China in human spaceflight In addition to examining contemporary psychological research several of the essays also explicitly address the history of the psychology of space exploration Leading contributors to the field place the latest theories and empirical findings in historical context by exploring changes in space missions over the past half century as well as reviewing developments in the psychological sciences during the same period The essays are innovative in their approaches and conclusions providing novel insights for behavioral researchers and historians alike
