Recent serious and sometimes fatal accidents in chemical research laboratories at United States universities have driven government agencies professional societies industries and universities themselves to examine the culture of safety in research laboratories These incidents have triggered a broader discussion of how serious incidents can be prevented in the future and how best to train researchers and emergency personnel to respond appropriately when incidents do occur As the priority placed on safety increases many institutions have expressed a desire to go beyond simple compliance with regulations to work toward fostering a strong positive safety culture affirming a constant commitment to safety throughout their institutions while integrating safety as an essential element in the daily work of laboratory researchers Safe Science takes on this challenge This report examines the culture of safety in research institutions and makes recommendations for university leadership laboratory researchers and environmental health and safety professionals to support safety as a core value of their institutions The report discusses ways to fulfill that commitment through prioritizing funding for safety equipment and training as well as making safety an ongoing operational priority A strong positive safety culture arises not because of a set of rules but because of a constant commitment to safety throughout an organization Such a culture supports the free exchange of safety information emphasizes learning and improvement and assigns greater importance to solving problems than to placing blame High importance is assigned to safety at all times not just when it is convenient or does not threaten personal or institutional productivity goals Safe Science will be a guide to make the changes needed at all levels to protect students researchers and staff  
*Research Laboratory Safety* Daniel Reid Kuespert, 2016-10-24  
Research Laboratory Safety explains the most important prerequisite when working in a laboratory Knowing the potential hazards of

equipment and the chemical materials to be employed Students learn how to assess and control risks in a research laboratory and to identify a possible danger An approach on the hazard classes such as physical chemical biological and radiation hazards is given and exercises to each class prepare for exams Chemical Safety in the Laboratory Stephen K.

Hall,2018-12-19 Nothing is more important to an organization than the health and safety of its workers The managerial effectiveness of any health and safety program is judged on the basis of how well it prevents injuries and ill health Chemical Safety in the Laboratory provides a proven approach to implementing and maintaining an effective chemical safety program for laboratories in hospital industrial and educational settings Based on 20 years of experience managing and auditing chemical safety programs the author discusses the OSHA Laboratory Standard and the Chemical Hygiene Plan provides guidelines for the effective use of personal protective equipment and details chemical emergency planning and response procedures He also outlines a 19 step decontamination procedure for emergency responders Employee chemical exposure monitoring and victim handling procedures are among the other major topics covered in this essential guide Laboratory Safety Guidance United States.
