techniques in plastic surgery as well as the most recent technical advances while maintaining a systematic approach to patient care within each chapter. Traversing the entirety of the human body, each chapter addresses assessment of defects, preoperative factors, pathology, trauma, operative indications, and procedure and more. Detailing over 90 specific surgical techniques, this book covers both reconstructive and aesthetic plastic surgery. A new section addresses non-invasive techniques such as Botox, injectables, lasers, and skincare. New chapters throughout the book also include ALT flaps, nasal cleft deformities, ZMC fractures, augmentation mastopexy, body contouring for the massive weight loss patient, and endoscopic carpal tunnel repair. Led by Gregory R D Evans, this volume assembles thought leaders in plastic surgery to present operative surgery in a clear, didactic, and comprehensive manner and lays the groundwork for ideas that we have just scratched the surface of, such as translational research, fat grafting, stem cells, and tissue engineering.
