Making A Motorway:

Tackling Congestion by Making Better Use of England's Motorways and Trunk Roads Great Britain: Parliament: House of Commons: Committee of Public Accounts, Stationery Office, The, 2005-06-28 Road congestion is estimated to cost industry and commerce 3 billion a year with around 7% of the motorway and trunk road network suffering heavy congestion at peak times Although the Government has set a target to stabilise congestion at 2000 levels by 2010 it has acknowledged that this will not be achieved This report which follows on from a report by the NAO HC 15 2004 05 ISBN 010293150X looks at how the Highways Agency is tackling the problem It concludes that the Agency has been too risk averse in testing and using measures adopted abroad and that they have failed to give motorists the information they need to make choices before and during their journeys

Designing Safe Road Systems Jan Theeuwes, Richard van der Horst, 2017-09-18 Many books focus on individual differences and how those relate to traffic safety such as accident proneness gender differences age alcohol and the effects of drugs Others focus on the safety effects regarding the vehicle such as airbags anti lock brakes navigation systems intelligent cruise control and other new gadgets coming to the vehicle Even though these topics are undoubtedly important for traffic safety this book takes a unique approach as it focuses solely on the road environment Designing Safe Road Systems provides the background for those who want to know more about the effects of road design on driving behaviour It uses a systems approach to allow a better understanding of why and in what circumstances drivers may commit errors This understanding will ultimately lead to road systems that prevent fatal errors from occurring The book contains an overview of the current models and theories about human performance and human behaviour in traffic that are relevant for all those involved in designing safe road systems The central theme of this book is how design principles can reduce the probability of an error while driving The authors demonstrate how knowledge of human factors helps a road authority to better understand how road users behave They argue that in many cases the design of the environment can be further adjusted to human capabilities and that safety should be considered a system property to be built into the road system

Department for Transport,2004 This study considers the feasibility of options for a new system of charging for road use in the UK in order to make better use of road capacity and to help reduce traffic congestion This would mean moving away from the current motoring taxation system and introducing a variable charging system depending on the level of road congestion Issues discussed include public attitudes travel trends options for national road pricing institutional aspects of implementation possible interim options to a national scheme including the UK lorry road user charging scheme and local congestion charging pathfinder schemes Amongst the report's conclusions it finds that national road pricing is becoming feasible in the medium term in 10 to 15 years and could meet the Government's objectives However its successful implementation requires the promotion of a greater degree of public acceptance Although a national scheme is still some years off a number of practical steps can be taken now in preparation including promoting a public debate to inform and raise awareness with research into road users behaviour and implications for business working with car manufacturers in the development of vehicle technology standards and working with local authorities on introducing local charging schemes to tackle congestion problems This document is published alongside the Transport White Paper The future of transport a network for 2030 Cm 6234 ISBN 0101623429 *Landscaping of Motorways* British Road Federation,1963
