comprehension with informational texts is a critical component of any reading program and one that many children struggle with as they progress through their schooling. Nonfiction can be overwhelming to young readers, presenting them with complex vocabulary and a new density of information that may combine text, diagrams, pictures, captions, and other devices. Reality Checks: Teaching Reading Comprehension with Non-Fiction K-5 offers insights into why children struggle when faced with informational reading and practical concepts, skills, and strategies that help them navigate nonfiction successfully. In this book, Tony Stead provides wonderful ways to enhance children's understanding and engagement when reading for information. He outlines practical approaches to ensure all children can become confident and competent readers of nonfiction. Part one examines effective ways to teach children how to extract the information that is explicitly stated in a text. Covered are strategies such as using prior knowledge, retelling, locating specific information, and the role of nonfiction read alouds. Part two explores interpreting information, including making connections between the text, the reader, and the outside world, making inferences, and making revisions to inferences based on reflection. Part three looks at evaluating information, assisting children in developing critical reading skills, differentiating fact from opinion, locating author bias, and identifying techniques writers use to persuade readers. Part four offers an array of practical ways to reinforce and extend children's nonfiction reading skills, including working with visual information such as maps and diagrams. Teaching to the Math Common Core State Standards, F. D. Rivera, 2015-06-17. This is a methods book for preservice middle level majors and beginning middle school teachers. It takes a very practical approach to learning to teach middle school mathematics in an emerging Age of the Common Core State Standards. The Common Core State Standards in Mathematics (CCSSM) is not meant to be the official mathematics curriculum; it was purposefully developed primarily to provide clear learning expectations of mathematics content that are appropriate at every grade level and to help prepare all students to be ready for college and the workplace. A quick glance at the Table of Contents in this book indicates a serious engagement with the recommended mathematics underlying the Grade

5 through Grade 8 and traditional pathway Algebra I portions of the CCSSM first with issues in content practice assessment learning teaching and classroom management pursued next and in that order In this book we explore what it means to teach to the CCSSM within an alignment mindset involving content practice learning teaching and assessment The Common Core state content standards which pertain to mathematical knowledge skills and applications have been carefully crafted so that they are teachable learnable coherent fewer clearer and higher The practice standards which refer to institutionally valued mathematical actions processes and habits have been conceptualized in ways that will hopefully encourage all middle school students to engage with the content standards more deeply than merely acquiring mathematical knowledge by rote and imitation Thus in the CCSSM proficiency in content alone is not sufficient and so does practice without content which is limited Content and practice are both equally important and thus must come together in teaching learning and assessment in order to support authentic mathematical understanding This blended multisourced text is a getting smart book It prepares preservice middle level majors and beginning middle school teachers to work within the realities of accountable pedagogy and to develop a proactive disposition that is capable of supporting all middle school students in order for them to experience growth in mathematical understanding that is necessary for high school and beyond including future careers
