**Making Health Care Decisions** United States. President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research,1982      **Making Health Care Decisions: Appendices** United States. President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research,1982      **Making Medical Decisions for the Profoundly Mentally Disabled** Norman L. Cantor,2009-08-21 A legal and moral analysis of medical decision making on behalf of those with such severe cognitive impairments that they cannot exercise self determination In this book Norman Cantor analyzes the legal and moral status of people with profound mental disabilities those with extreme cognitive impairments that prevent their exercise of medical self determination He proposes a legal and moral framework for surrogate medical decision making on their behalf The issues Cantor explores will be of interest to professionals in law medicine psychology philosophy and ethics as well as to parents guardians and health care providers who face perplexing issues in the context of surrogate medical decision making The profoundly mentally disabled are thought by some moral philosophers to lack the minimum cognitive ability for personhood Countering this position Cantor advances both theoretical and practical arguments for according them full legal and moral status He also argues that the concept of intrinsic human dignity should have an integral role in shaping the bounds of surrogate decision making Thus he claims while profoundly mentally disabled persons are not entitled to make their own medical decisions respect for intrinsic human dignity dictates their right to have a conscientious surrogate make medical decisions on their behalf Cantor discusses the criteria that bind such surrogates He asserts contrary to popular wisdom that the best interests of the disabled person are not always the determinative standard the interests of family or others can sometimes be considered Surrogates may even consistent with the intrinsic human dignity standard sometimes authorize tissue donation or participation in nontherapeutic medical research by profoundly disabled persons Intrinsic human dignity limits the occasions for such decisions and dictates close attention to the preferences and feelings of the profoundly disabled persons themselves Cantor also analyzes the underlying philosophical rationale that makes these decision making criteria consistent with law and morals      Making Health Care Decisions: Appendices: Empirical studies of informed consent United States. President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research,1982      **Prison Inmates in Medical Research** United States. Congress. House. Committee on the Judiciary. Subcommittee on Courts, Civil Liberties, and the Administration of Justice,1976      **Long-term Care Administration Handbook** Seth B. Goldsmith,1993 This handbook is the definitive comprehensive reference for long term care administration It provides new ideas proven approaches practical suggestions for every aspect of long term care facility management Each chapter contains a collection of specialized advanced expertise presented by long term care administrators consultants academics planners attorneys architects nurses      The Practice of Autonomy Carl Schneider,1998 Exploring what patients do want gives direction to the author s inquiry

into what they should want What patients want he believes is properly more complex and ambiguous than being empowered In this book he charts that ambiguity to take the autonomy principle past current pieties into the uncertain realities of the sick room and the hospital ward The Practice of Autonomy is a sympathetic but trenchant study of the animating principle of modern bioethics It speaks with freshness insight and even passion to bioethicists and moral philosophers about their theories to lawyers about their methods to medical sociologists about their subject to policy makers about their ambitions to doctors about their work and to patients about their lives BOOK JACKET Assigning Responsibility for Children's Health When Parents and Authorities Disagree: Whose Child? Allan J. Jacobs, 2021-10-25 This book provides a multidisciplinary analysis of the potential conflict between a government's duty to protect children and a parent's right to raise children in a manner they see fit Using philosophical bioethical and legal analysis the author engages with key scholars in pediatric decision making and individual and religious rights theory Going beyond the parent child dyad the author is deeply concerned both with the interests of the broader society and with the appropriate limits of government interference in the private sphere The text offers a balance of individual and population interests maximizing liberty but safeguarding against harm Bioethics and law professors will therefore be able to use this text for both a foundational overview as well as specific subject level analysis Clinicians such as pediatricians and gynecologists as well as policy makers can use this text to achieve balance between these often competing claims The book is written by a physician with practical and theoretical knowledge of the subject and deep sympathy for the parental and family perspectives As such the book proposes a new way of evaluating parental and state interventions in children's healthcare a refreshing approach and a useful addition to the literature

Holding Health Care Accountable E. Haavi Morreim, 2001-08-16 Health care in the US and elsewhere has been rocked by economic upheaval Cost cuts care cuts and confusion abound Traditional tort and contract law have not kept pace Physicians are still expected to deliver the same standard of care including costly resources to everyone regardless whether it is paid for Health plans can now face litigation for virtually any unfortunate outcome even those stemming from society's mandate to keep costs down while improving population health This book cuts through the chaos and offers a clear persuasive resolution Part I explains why new economic realities have rendered prevailing malpractice and contract law largely anachronistic Part II argues that pointing the legal finger of blame blindly or hastily can hinder good medical care Instead of whom do we want to hold liable we should focus first on who should be doing what for the best delivery of health care When things go wrong each should be liable only for those aspects of care they could and should have controlled Once a good division of labor is identified what kind of liability should be imposed depends on what kind of mistake was made Failures to exercise adequate expertise knowledge skill care effort should be addressed as torts while failures to provide promised resources should be resolved under contract Part III shows that this approach though novel fits remarkably well with basic common law doctrines and can even enlighten ERISA issues With extensive documentation from current case law commentary and empirical

literature the book will also serve as a comprehensive reference for attorneys law professors physicians administrators bioethicists and students      **Hearing on H.R. 1415, the Patient Access to Responsible Care Act (PARCA)** United States. Congress. House. Committee on Education and the Workforce. Subcommittee on Employer-Employee Relations,1998

access to quality affordable health care in a competitive market environment      Organizational Decision Making Zur Shapira, 2002-03-25 Decision making in organizations is often pictured as a coherent and rational process in which alternative interests and perspectives are considered in an orderly manner until the optimal alternative is selected Yet as many members of organizations have discovered from their own experience real decision processes in organizations only seldom fit such a description This book brings together researchers who focus on cognitive aspects of decision processes on the one hand and those who study organizational aspects such as conflict incentives power and ambiguity on the other It draws from the tradition of Herbert Simon who studied organizational decision making s pervasive use of bounded rationality and heuristics of reasoning These multiple perspectives may further our understanding of organizational decision making Organizational Decision Making is particularly well suited for students and faculties of business psychology and public administration      **Case Studies in Pharmacy Ethics** Robert M. Veatch, Amy Marie Haddad, 1999 Every pharmacist constantly makes ethical choices Sometimes these choices are dramatic life and death decisions but often they are more subtle less conspicuous choices that are nonetheless important Assisted suicide conscientious refusal pain management equitable and efficacious distribution of drug resources within institutions and managed care plans confidentiality and alternative and non traditional therapies are among the issues that are of unique concern to pharmacists One way of seeing the implications of such issues and the moral choices they pose is to look at the experiences and the choices that have had to be made in situations typically faced by pharmacists This book is a collection of those situations based on the real experiences of practicing pharmacists The use of case studies in health care ethics is not new but in pharmacy it is This text is an important teaching tool that will help pharmacy students and pharmacists address the increasing number of ethical problems arising in their profession It is not merely a compilation of cases but rather is organized for the systematic study of applied ethics Part I shows how to distinguish ethical problems from other kinds of evaluative judgments and examines the sources of values in pharmacy posing basic questions about the meaning and justification of ethical claims Part II explores the basic principles of ethics as they have an impact on pharmacy Specific cases from clinical settings present in a systematic way the various questions raised by each of the major ethical principles benefiting the patient distributing resources justly respecting autonomy dealing honestly with patients keeping promises of confidentiality and avoiding killing Part III examines some of the special problems of contemporary pharmacy such as the linkages between pharmaceutical care and professional practice human experimentation reproductive issues genetic technology death and dying and mental health      Nursing Ethics and Professional Responsibility in Advanced Practice Pamela June Grace, 2017-02-17 Nursing Ethics and Professional Responsibility in Advanced Practice Third Edition remains the only comprehensive textbook available on the ethical issues faced by APNs giving front line care It is a critically important resource for students preparing for advanced practice and nursing leadership in both the United States and around the world The author demystifies the principles and language of
