Color in the Age of Impressionism Laura Anne Kalba, 2017-04-21 This study analyzes the impact of color making technologies on the visual culture of nineteenth century France from the early commercialization of synthetic dyes to the Lumière brothers' perfection of the autochrome color photography process Focusing on Impressionist art Laura Anne Kalba examines the importance of dyes produced in the second half of the nineteenth century to the vision of artists such as Edgar Degas Pierre Auguste Renoir and Claude Monet The proliferation of vibrant new colors in France during this time challenged popular understandings of realism abstraction and fantasy in the realms of fine art and popular culture More than simply adding a touch of spectacle to everyday life Kalba shows these bright varied colors came to define the development of a consumer culture increasingly based on the sensual appeal of color Impressionism emerging at a time when inexpensively produced color functioned as one of the principal means by and through which people understood modes of visual perception and signification mirrored and mediated this

Truth in Serial Form Malika Maskarinec, 2023-04-27. This volume has its starting point in the veritable explosion of serialized formats in all of forms representation from painting to printing beginning in the mid nineteenth century and the well known fascination with series in biology, mathematics, music, art or literature. The new media culture of the late nineteenth century very much shaped by these serialized formats sees itself confronted with questions of truthfulness in new and profound ways just as perhaps the accelerated rhythm, anonymity and broadened accessibility of new media today have created new possibilities for the dissemination of misinformation and conversely give us cause to interrogate anew our notions of truthfulness. By examining both the formal operations of both aesthetic and scientific objects in a series form and the historical context of their publication or presentation, the contributions in this volume examine the often strained but yet immensely productive relationship between the way in which a series negotiates questions of truthfulness both by reference to the rules established in its series form or by means of its serial format. This volume provides ten detailed cases of the series form from the history of science and journalism and the history of painting, photography and literature as well.

Monet's Passion, 1989. In this best selling book Elizabeth Murray discusses the development and maintenance of Claude Monet's Giverny estate as well as Monet's color theories, design elements and use of light and shade. Origins of Impressionism Gary Tinterow, Henri Loyrette, 1994. This handsome publication which accompanies a major exhibition at The Metropolitan Museum of Art is a lively and engaging account of the artistic scene in Paris in the 1860s, the years that witnessed the beginnings of Impressionism. For the first time the interactions and relationships among the group of painters who became known as the Impressionists are examined without the overworn art historical polarities commonly evoked: academic versus avant garde, classicist versus romantic, realist versus impressionist. A host of strong personalities contributed to this history and their style evolved into a new way of looking at the world. These artists wanted above all to give an impression of truth and to have an impact on or even to shock the public. And they wanted to measure up to or surpass their elders. This complex and rich environment is presented here: the grand old men and the young Turks encounter each other, the Salon pontificates and the new generation moves fitfully ahead, benignly but always with determination. *Origins of Impressionism* gives a day by day, year by year study of the genesis of an epoch making style. Bibliographies and provenances are provided for each of the almost two hundred works in the exhibition and there is an illustrated chronology. With more than two hundred superb colorplates, this informative survey is an essential

Susanne Biundo,Thom Frühwirth,Günther Palm,2005-01-11 KI2004wasthe27theditionoftheannualGermanConferenceonArtificialIntelligence which traditionally brings together academic and industrial researchers from all areas of AI and which enjoys increasing international attendance KI 2004 received 103 submissions from 26 countries This volume contains the 30 papers that were nally selected for presentation at the conference The papers cover quite a broad spectrum of classical subareas of AI like natural language processing neural networks knowledge representation reasoning planning and search When looking

at this year's contributions it was exciting to observe that there was a strong trend towards actual real world applications of AI technology. A majority of contributions resulted from or were motivated by applications in a variety of areas. Examples include applications of planning where the technology is being exploited for taxiway traffic control and game playing, natural language processing and knowledge representation are enabling advanced Web-based information processing and the integration of results from automated reasoning, neural networks and machine perception into robotics leads to significantly improved capabilities of autonomous systems. The technical programme of KI 2004 was highlighted by invited talks from outstanding researchers in the areas of automated reasoning, robot planning, constraint reasoning, machine learning and semantic Web. Jorg Siekmann (DFKI and University of Saarland, Saarbrücken), Ken Malik (Ghallab, LAAS-CNRS, Toulouse), Franco Fages (INRIA Rocquencourt), Martin Riedmiller (University of Nabru ck and Wolfgang Wahlster (DFKI and University of Saarland, Saarbrücken). Artificial Intelligence, Human Agency and the Educational Leader Rosemary Papa, Karen Moran Jackson, 2021-12-06. This book includes contributions by scholars from a variety of disciplines, the dialogue and discourse on how AI/artificial intelligence development includes and/or excludes pedagogical/educational learning theories focused on the learner. A call from Educational Leaders Without Borders (ELWB) was issued to scholars from across the globe who were asked to write a vignette described as an evocative description or account on how education leaders envision education in 2051 and AI beyond mere product purchase. These vignettes should engage us in questions as to how the development and use of AI technologies are shaped. As educators who believe education should be established on social justice beliefs and practices, our review of literature shows there are no books addressing the complexities of AI development and the role of educators. The futuristic element is unique in its approach to imagine a socially just better world in which to inspire educators. This unique feature encourages creativity in how one addresses the call to imagine a future world and our role as educators in that world.
