A History of Architecture and Urbanism in the Americas Clare Cardinal-Pett, 2015-11-19 A History of Architecture and

Urbanism in the Americas is the first comprehensive survey to narrate the urbanization of the Western Hemisphere from the Arctic Circle to Antarctica making it a vital resource to help you understand the built environment in this part of the world. The book combines the latest scholarship about the indigenous past with an environmental history approach covering issues of climate, geology, and biology so that you will see the relationship between urban and rural in a new, more inclusive way. Author Clare Cardinal Pett tells the story chronologically from the earliest known human migrations into the Americas to the 1930s to reveal information and insights that weave across time and place so that you can develop a complex and nuanced understanding of human-made landscape forms, patterns of urbanization, and associated building typologies. Each chapter addresses developments throughout the hemisphere and includes information from various disciplines, original artwork, and historical photographs of everyday life, which along with numerous maps, diagrams, and traditional building photographs will train your eye to see the built environment as you read about it.

Building in China Jeffrey W. Cody, 2021-01-15. Building in China is about striking an architectural balance between the pull of monumental tradition and the push of technological novelty. Centering on the dynamic period of post-imperial and pre-Communist China, the book focuses on the building and city planning initiatives of Henry Murphy, a little-known American architect who initially ventured to China in 1914 to design a campus for the Yale in China programme but who then found himself captivated by a professional and cultural challenge that lasted two decades: how to preserve China's rich architectural traditions while also designing new buildings using up-to-date Western technologies. Murphy's buildings were compromises, wine in old bottles as he once called them, and the book uses those as lenses through which to understand not only Murphy's quest to find a middle ground for his architecture in China but also to gaze at a tumultuous society facing an uncertain future. Murphy's buildings were more than vessels for either aesthetic visions or technical expertise; inadvertently, they became political emblems as Chinese rulers such as Chiang Kai-shek and Sun Yat-sen's son called on Murphy for city planning advice to complement their hopes for urban reconstruction. There are few serious studies of Western architects in the twentieth century who practiced in non-Western contexts, and those scant studies that have been published concentrate largely on British, French, or Dutch examples in colonial settings. Hence, the book makes significant contributions to the fields of both American and Chinese architectural history.

Architecture as Communication Ross A. Eaman, 2025-04-08. Media theory has long overlooked the built environment and its communicative capacity: how built structures and spaces convey meaning through material embodiment and symbolization. Architecture as Communication advances the idea that built environments function as media of communication. Using practice theory in conjunction with the concept of style, this book is anchored in three historical determinants: the quest for perfect proportion in buildings, the belief in architectural determinism, and the ongoing efforts within other media to influence how those who experience built environments understand them. Ross Eaman explores how houses, schools, places of worship, factories, office buildings, stores, malls, opera houses, plazas, and parks have meaning for people as subjective life.

worlds Architecture as Communication proposes media theory that articulates the social construction of meaning as a unique way of understanding the built environment one in which the users and observers of structures and spaces participate along with architects and designers Architecture according to Eaman encompasses the multiplicity of communication as human interaction preparing people for what they are about to encounter signalling how they should act and selectively enabling them to perform their expected role Using examples across many historical periods and cultures Architecture as Communication argues that we judge our built environments by the values they communicate

Money of the Mind James Grant, 1994-05 The 1980s witnessed a lemming like rush into the sea of debt on the part of the American industrial and financial communities with consequences we are only beginning to appreciate But the speculative frenzy of the eighties didn't just happen It was the culmination of a long cycle of slow relaxation of credit practices the subject of James Grant's brilliant clear eyed history of American finance Two long running trends converged in the 1980s to create one of our greatest speculative booms the democratization of credit and the socialization of risk At the turn of the century it was almost impossible for the average working person to get a loan In the 1980s it was almost impossible to refuse one As the pace of lending grew the government undertook to bear more and more of the creditors risk a pattern begun in the Progressive era which reached full flower in the conservative administration of Ronald Reagan Based on original scholarship as well as firsthand observation Grant's book puts our recent love affair with debt in an entirely fresh often chilling perspective The result is required and wickedly entertaining reading for everyone who wants or needs to understand how the world really works A brilliantly eccentric kaleidoscopic tour of our credit lunacy A splendid tooth gnashing saga that should be savored for its ghoulish humor and passionately debated for its iconoclastic analysis It is a fitting epitaph to the credit binge of the 80s Ron Chernow The Wall Street Journal

This timely book traces the development of banking and paper money in republican Tianjin in order to explore the creation of social trust in financial institutions Framing the study around Bian Baimei a conscientious branch manager of the Bank of China Brett Sheehan analyzes the actions of bankers officials and local elites as they tried to overcome political and financial crises and instill trust in the banking system After early failures in promoting trust government authority as a regulator of the financial system gradually increased peaking in 1935 when the state unified the money supply for the first time in several hundred years Concurrently when local elites proved unable to develop successful strategies to make people trust the system their influence declined The need for trust in increasingly complex financial arrangements redefined state society relations simultaneously enhancing state power and creating new constraints on the actions of both elites and governments Trust in Troubled Times is a valuable new perspective on the economic social and political history of modern China
