was a moonlit night at the rocket base For weeks the scientists had been preparing for the launching of a new rocket Reporters were standing by On this night everyone was asleep except the guard who carefully kept watch Suddenly there was a roar that grew louder and louder and the rocket began to lift off its pad Its going up shouted the guard Its blasting off yelled the scientists What Where called the reporters as they climbed out of their beds Who Why When and how Inside the capsule Sam the monkey was pulling switches and pushing buttons as he had been taught Everything was according to plan except that the rocket had not been launched by the scientists but by another monkey Sarah But this is only the beginning What happens is important to the whole world and makes a tale of a monkey that is full of fun *Albert II: 1st Monkey in Space* Joeming Dunn,2011-09-01 Animals have been an influential part of science technology and travel throughout time Albert II The 1st Monkey in Space introduces readers to the historical climate of the 1920s through 1950s background on Albert II a chronology of Albert s trip into space and how that mission influenced history Colorful graphic art diagrams of rockets history on the Space Race fast facts and a glossary will bring the historic mission to a younger audience A great supplement to your history graphic novel collection The Day the Universe Exploded My Head Allan Wolf,2019-03-05 Hang on tight for a raucous bounce through the solar system and back propelled by funny fanciful factually sound poems and exuberant illustrations The universe poured into me My brain was overloaded It smoked and glowed red hot And then it actually exploded Ever wonder what the sun has to say about being the closest star to Earth Or what Pluto has gotten up to since being demoted to a dwarf planet Or where rocket ships go when they retire Listen closely because maybe just maybe your head will explode too With poetry that is equal parts accurate and entertaining and illustrations that are positively out of this world this book will enthrall amateur stargazers and budding astrophysicists as it reveals many of the wonders our universe holds Space travelers in search of more information will find notes about the poems a glossary and a list of resources at the end **Laika's Window** Kurt Caswell,2018-09-18 Laika began her life as a stray dog on the streets of Moscow and died in 1957 aboard the Soviet satellite Sputnik II Initially the USSR reported that Laika the first animal to orbit the earth had survived in space for seven days providing valuable data that would make future manned space flight possible People believed that Laika died a painless death as her oxygen ran out Only in recent decades has the real story become public Laika died after only a few hours in orbit when her capsule overheated Laika s Window positions Laika as a long overdue hero for leading the way to human space exploration Kurt Caswell examines Laika s life and death and the speculation surrounding both Profiling the scientists behind Sputnik II he studies the political climate driven by the Cold War and the Space Race that expedited the satellite s development Through this intimate portrait of Laika we begin to understand what the dog experienced in the days and hours before the launch what she likely experienced during her last moments and what her flight means to history and to humanity While a few of the other space dog flights rival Laika s in endurance and technological advancements Caswell argues that Laika s flight serves as a tipping point in space exploration beyond which

the dream of exploring nearby and distant planets opened into a kind of fever from which humanity has never recovered Examining the depth of human empathy what we are willing to risk and sacrifice in the name of scientific achievement and our exploration of the cosmos and how politics and marketing can influence it Laika's Window is also about our search to overcome loneliness and the role animals play in our drive to look far beyond the earth for answers **Aeronautics and**

Animals in Space Colin Burgess, Chris Dubbs, 2007-07-05 Many readers will doubtless be astonished to learn that animals were being fired aloft in U.S. and Soviet research rockets in the late 1940s In fact most people not only believe that the Russian space dog Laika was the first canine to be launched into space but also that the high profile precursory Mercury flights of chimps Ham and Enos were the only primate flights conducted by the United States In fact both countries had sent literally dozens of animals aloft for many years prior to these events and continued to do so for many years after Other latter day space nations such as France and China would also begin to use animals in their own space research Animals in Space will explain why dogs primates mice and other rodents were chosen and tested at a time when dedicated scientists from both space nations were determined to establish the survivability of human subjects on both ballistic and orbital space flights It will also recount the way this happened the secrecy involved and the methods employed and offer an objective analysis of how the role of animals as spaceflight test subjects not only evolved but subsequently changed over the years in response to a public outcry led by animal activists It will explore the ways in which animal high altitude and space flight research impacted on space flight biomedicine and technology and how the results both successful and disappointing allowed human beings to then undertake that same hazardous journey with far greater understanding and confidence This book is intended as a detailed yet highly readable and balanced account of the history of animal space flights and the resultant application of hard won research to space technology and astrobiology It will undoubtedly become the ultimate authority on animal space flights Space Monkeys - The Untold Story!
