human traits as bipedalism extensive brain growth language and socialization He also reviews the rituals by which many human societies construct and reinforce the meanings of socially recognized fatherhood Father care was adaptive within the context of the parental pair bond and shaped how infants developed socially and biologically The initial imprinting of socially recognized fathers during the first few postnatal years may have sustained culturally sanctioned indirect care such as provisioning and protection of dependents for nearly two decades thereafter In modern humans this three year window is critical to father child bonding By increasing the survival of children in the past present and quite possibly the future father care may be a driving force in the biological and cultural evolution of Homo sapiens      **Introduction to Anthrology** Mr. Rohit Manglik,2024-03-02

particularly interested in the influence of role status class and power on experience and behaviour in the family and in the community in the factors which contribute to cohesion and conflict in social structure and social stratification and in social problems such as crime drug addiction and domestic violence      **Social Sciences and Philology** Andreas
