**Algebraic and Logic Programming** Helene Kirchner, Giorgio Levi, 1992-08-19 This volume contains the proceedings of the Third International Conference on Algebraic and Logic Programming held in Pisa Italy September 2 4 1992 Like the two previous conferences in Germany in 1988 and France in 1990 the third conference aims at strengthening the connections between algebraic techniques and logic programming On the one hand logic programming has been very successful during the last decades and more and more systems compete in enhancing its expressive power On the other hand concepts like functions equality theory and modularity are particularly well handled in an algebraic framework Common foundations of both approaches have recently been developed and this conference is a forum for people from both areas to exchange ideas results and experiences The book covers the following topics semantics of algebraic and logic programming integration of functional and logic programming term rewriting narrowing and resolution constraint logic programming and theorem proving concurrent features in algebraic and logic programming languages and implementation issues

**Uranium Ore Deposits** Franz J. Dahlkamp, 2013-03-09 An important prerequisite to the long term use of nuclear energy is information on uranium ore deposits from which uranium can be economically exploited Hence the basic purpose of this book is to present an overview of uranium geology data characteristic for uranium deposits and a synthesis of these data in the form of a typological classification of uranium deposits supported by more detailed descriptions of selected uranium districts and deposits An additional goal is to provide access for the interested reader to the voluminous literature on uranium geology Therefore a register of bibliography as global as possible extending beyond the immediate need for this book is provided The volume presented here was not originally designed as a product for its own sake It evolved as a by product during decades of active uranium exploration and was compiled thanks to a request by the Springer Publishing Company Routine research work on identifying characteristic

features and recognition criteria of uranium deposits combined with associated modeling of types of deposits for reapplication in exploration provided the data bank The publisher originally asked for a book on uranium deposits structured as a combined text and reference book The efforts to condense all the text into a single publication were soon doomed The material grew out of all feasible proportions for a book of acceptable size and price a wealth of data on uranium geology and related geosciences having become available during the past decade too vast for one volume
