The Emergence of Civilization Charles Keith Maisels, 2003-12-16 The Emergence of Civilisation is a major contribution to our understanding of the development of urban culture and social stratification in the Near Eastern region Charles Maisels argues that our present assumptions about state formation based on nineteenth century speculations are wrong His investigation illuminates the changes in scale complexity and hierarchy which accompany the development of civilisation The book draws conclusions about the dynamics of social change and the processes of social evolution in general applying those concepts to the rise of Greece and Rome and to the collapse of the classical Mediterranean world

Mycenaean Civilization Bryan Feuer, 2004-03-16 Classical Greeks considered the Mycenaean civilization to be the basis of their glorious and heroic heritage but its material existence was not

confirmed until the excavations of Heinrich Schliemann in the late nineteenth century In the ensuing years as with the field of archaeology in general emphasis has shifted from revealing monuments and finding treasure to dealing with less glamorous more scientifically oriented investigations concerning aspects such as social and political organization economic functions and settlement patterns With its more than 2000 entries this reference work serves as both an introduction to and a summary of the study of ancient Mycenaean civilization Considerably expanded from the first edition there are 500 new entries representing materials published since 1991 The largest part of the book is made up of annotated bibliography entries arranged topically with introductory material for each section The book also includes a general introduction to Mycenaean civilization a glossary and author place and subject indexes

Temples and Sanctuaries from the Early Iron Age Levant

William E. Mierse, 2012-10-15 The vision for this impressive work on temple architecture in the Levant grew out of the author's work on Roman temple designs on the Iberian Peninsula and continual references to Semitic influences on the designs of sanctuaries both on the Peninsula and in North Africa. It was assumed that Phoenician colonization had brought with it the full flowering of Levantine architectural forms. As Mierse began to search for relevant material on the ancient Levant, however, he discovered that no overall synthesis had ever been written and it was virtually impossible to recognize and isolate Semitic elements in architectural forms. This book addresses this need. The analysis presented here is comparative and follows the methodology most commonly employed by architectural historians throughout the twentieth century. It is a formalist approach and permits the isolation of lines of continuity and the detection of discontinuity. While Mierse relies heavily on this traditional method, he also introduces some approaches from the postprocessual school of archaeology in its attempts to discern an appropriate way for cult to be investigated by archaeology. The sanctuaries that this book presents were erected between the end of the Late Bronze Age (conventionally assigned the date of 1200 B.C.E.) and the annexation of the Levantine region into the Assyrian Empire, when Mesopotamia again became highly influential in the region. The topic concerns temples that were produced during the period when the Levant was its own entity and politically independent of Egypt, Mesopotamia, or Anatolia. During this period, the designs chosen for inclusion in this book must reflect local choices rather than resulting from imposed outside concepts. The architecture that emerged in the wake of the downfall of the Late Bronze Age and the subsequent reemergence of social cohesiveness manifested significant changes in form and function. The five centuries under review reveal exciting developments in sacred architecture and show that although the architects of the first millennium B.C.E. maintained important lines of continuity with the developments of the previous two millennia, they were also capable of creating novel forms to meet new needs. Included in this fascinating volume are 90 pages of photos, drawings, floor plans, and maps.

A Cultural Encyclopedia of Lost Cities and Civilizations Michael Shally-Jensen, Anthony Vivian, 2022-11-11 A stimulating volume for readers interested in lost cultures or climate change's role in the past and present. Library Journal. This volume explores the span of human history and plenty of prehistory, searching out prominent and fascinating examples of cities or broader civilizations that shifted from a position of influence to a lack thereof. The accelerating threat of climate change challenges us to analyze our own communities' relationships with the wider world and to contemplate their very existence. This single-volume cultural encyclopedia examines lost cities and civilizations from every region of the globe and dated throughout human history. Arranged alphabetically, the compilation allows both students and general readers easy access to detailed entries on specific lost cities and civilizations. Throughout the geographically and chronologically diverse entries, such themes as colonization, migration, and especially climate change are developed and analyzed. Supplementing the main entries are sidebars detailing mythological cities and Investigative Boxes examining

present day cities on the brink of extinction These round out the book s focus on disappearing cultural centers and reveal the robust relevance this material has to a world facing the crisis of climate change *A Gazetteer of Aegean Civilisation in the Bronze Age* R.
