managing mycotoxin infestations      *Mycotoxins in Fruits and Vegetables* R. Barkai-Golan, Nachman Paster, 2011-09-02  
Mycotoxins are toxins produced by aerobic microscopic fungus under special conditions of moisture and temperature They  
colonize in a variety of foods from harvest to the grocer Mycotoxins have gained world wide interest in recent years with the  
revelation of the effect of these toxins on health A current example is the presence of ochratoxin A a human carcinogen and  
nephrotoxin in wines The increased concern about fruit safety has led to increased studies throughout the world and  
enhanced awareness for stringent regulations governing mycotoxin limits in food Presented in three defined sections this is  
the first book to provide comprehensive analysis of the main mycotoxins contaminating fruits and vegetables and their  
derived products The first section provides a safety evaluation of mycotoxins in fruits and vegetables details regarding  
factors affecting mycotoxin production and diffusion in the fruit tissue and recent methods for detection of mycotoxigenic  
fungi and mycotoxins produced by the fungi The second part takes a critical look at the main individual mycotoxins and the  
third section focuses on approaches for prevention and control The first book dedicated to mycotoxins in fruits and  
vegetables Presents mycological mycotoxicological and phytopathological aspects of fruits and vegetables Includes an  
analysis of detection prevention and control methods for mycotoxigenic fungi and the mycotoxins they produce Provides a  
complete risk assessment and safety evaluation of mycotoxins in perishable produce      **Mycotoxin and Food Safety in**
