Baguant, Wolfgang Lutz, C. Prinz, F.L. Toth, A.B. Wils, 2013-06-29 Because the number of options is often limited small island states tend to find it uncommonly difficult to strike a balance between population environment and development Relatively high population density and small land areas without much in the way of natural resources do not provide the best of circumstances for improving the living conditions of the population especially a fast growing one The result is often stunted economic development and environmental stress both on land and offshore The developments in the island state of Mauritius over the past 30 years however can serve as an inspiration and illustration of how extremely adverse conditions can be overcome In the early 1960s Mauritius was trying to cope with rapid population growth extreme poverty and grim economic prospects Population density was 324 inhabitants per km total fertility was 5.7 and GNP per capita was less than 200 In 1990 the situation in Mauritius was radically different Although population density had increased to 527 inhabitants per km total fertility had dropped to 2.0 and GNP per capita had increased to 2,310 Economic stagnation had been replaced by steady growth and full employment and environmental problems were being

addressed as issues of high priority
