Resettled Community to the Newly-Built Environment A Study of the Nubian Experience in Egypt Wael Salah Fahmi, 2014-04-01 Generally construction of dams is regarded as means of economic progress in many countries Major consequences of such projects are the inundation of upstream areas and the resettlement of entire communities in newly built environments where they experience dramatic transformation in their lifestyles The present study takes the Nubian resettlement experience after the creation of Lake Nasser that submerged their old settlements along the river Nile Following their resettlement the design of the newly built environment disrupted the Nubian traditional lifestyles and patterns of privacy mechanisms territoriality and social interaction The inadequacy of the newly built environment was mainly attributed to the Nubians transfer from spacious homes in the old villages to compact contiguous houses in the new settlements The arrangement of these resettlement state built houses distributed on the basis of household size has further resulted in the fragmentation and the dispersion of traditional kinship based neighborhoods Within an interdisciplinary approach the study is based on theoretical historical and conceptual themes and on empirical research It sets out to examine the households responses towards and adaptation mechanisms with the newly built environment looking critically at the achievements of imposed top down planning in meeting the socio cultural and economic needs of those resettled

Changes and Innovations in Social Systems Sarka Hoskova-Mayerova, Cristina Flaut, Daniel Flaut, Pavlina Rackova, 2025-05-13 This book presents challenges and innovations in social problems over the centuries By their nature human beings are innovative and continuously adapted to appeared changes over the time From this point of

view human history can be considered as the story of all changes and innovations which have drastically influenced our way of life. Changes and innovations are normal things in the way of adaptation and are necessary conditions for survival along the time. Changes and innovations are hard and long term processes. Any progress in history is the result of changes and innovations. To innovate changes are required in the culture, in the education, in the way of working, in the way of think etc. In the same time innovations imply changes and changes usually generate reactions. Innovations are always oriented to the future and in turn imply changes. From here the race of evolution was born. Changes require effort, generate resistance but in the same time increase performance in almost all domains and increase vision and leadership, therefore the progress is obtained. To grow up as a field and provide changes innovations need to present its theoretical foundations which make sense of the domains on which they are applied. To emphasize the above aspects the proposed book presents some aspects regarding but not only limited to computer science, new theoretical and practical applications, mathematics, mathematical models, all mathematical results which can improve or are inspired from another known results, some aspects regarding history of mathematics etc, education etc. The chapters of the book present the state of arts of the chosen subjects from its beginning its developments and its applications by emphasizing the connection with the application or model that the authors have chosen for the presentation. Systems thinking: strengthening health systems in practice Kara Durski, Karl Blanchet, Aku Kwamie, Maria Del Rocio Saenz, 2023-12-12. As health systems all over the world not only recover from COVID 19 but learn to adapt to contexts of increasing uncertainty amidst persistent challenges it is clear that systems thinking has never been needed more. Systems thinking is an approach to problem solving that views problems as part of a wider dynamic system. It recognizes and prioritizes the understanding of linkages, relationships, interactions and interdependencies among the components of a system that give rise to the system's observed behaviour. Systems thinking is a philosophical frame and it can also be considered a method with its own tools. Identifying ways in the short and long term which strengthen health systems is critical and applied systems thinking offers opportunities to do this. Systems thinking is often considered to be a field, a discipline, a philosophical approach and a set of tools and methods and can be defined as a way to understand and improve complex issues and situations. Despite broad consensus that systems thinking is important in health systems strengthening it remains underutilized by researchers, public health practitioners and health decision makers. Further a gap remains in the translation from concept to policy.
