

1.1 Introduction

Over the centuries, human needs and wants continued to evolve. These needs and wants were satisfied from the natural environment in the earliest stages of ancient civilizations. For instance, they lived in caves to have shelter and hunted animals to appease their hunger. Then mankind moved to villages and performed cultivation and farming to establish a self-sufficient community. As a result, these humans began to be specialized in performing cultivation and farming. Owing to the specialization they produced more than their requirements and a surplus was produced. This surplus was exchanged with the other producers of surplus products to fulfil their needs and wants (i.e., *the Barter system*). However, ancients encountered various difficulties in this old method of goods exchange due to the absence of a common medium of exchange. Consequently, they used salt, tobacco, shells, and small pieces of baked clay as a commonly accepted medium for exchange. Afterwards, coins and notes were introduced as a medium for exchange. These notes and coins have been replaced by a virtual medium of exchange called *electronic cash* (i.e., e-cash) with digital-based technologies. In the meantime, industrialization has historically led to urbanization by creating economic growth and employment opportunities. Thus, people began to migrate from villages to cities to exploit these opportunities and to undertake their economic activities efficiently and effectively.

Businesses are organizations formed to satisfy human needs and wants. It is considered as an economic unit since it performs various economic activities such as production, distribution, and consumption of goods, providing services such as banking, consultancy, healthcare, education, transportation, etc. Business entities collect and utilize resources (i.e., human, physical, natural, intellectual, financial) to undertake their business activities efficiently and effectively. The business collects these resources from resource providers. Generally, the owner of the business is treated as a resource provider. However, certain businesses possess a group of individuals as resource providers. These collected resources are utilized by owners to carry out business activities. In addition, owners also may appoint well-experienced managers on their behalf to utilize resources and perform business activities.

Business entities interact with various individuals, groups of individuals, private and public institutions to perform economic activities (i.e., managers, employees, loan providers, trade unions, customers, suppliers, public, the government, etc.). These parties have an interest on the business and can either affect or be affected by the business who are often called *stakeholders*. Thus, managing stakeholder relationships is considered as a key to organizational success.
