Porta,2014-09-25 Social movement studies have grown enormously in the last few decades spreading from sociology and political science to other fields of knowledge as varied as geography history anthropology psychology economics law and others With the growing interest in the field there has been also an increasing need for methodological guidance for empirical research This volume addresses this need by introducing the main methods of data collection and data analysis as they have been used in past research on social movements Unlike other volumes the book offers a practical how to approach and not simply a review of the methodological literature Each author writes on a method they are very familiar with having used it extensively in their own work And each chapter presents specific discussions on every stage of research from research design to data collection and the use of the information gathered Throughout research dilemmas and choices are presented illustrated and discussed The volume offers an essential point of references for anyone undertaking research on social movements **The SAGE Handbook of Applied Social Research Methods** Leonard Bickman,Debra J.

Hurworth,2008-01-01 Over the past two decades there has been a plethora of book for students about how to tackle Qualitative Research QR but absolutely nothing on how to teach it This book attempts to redress the imbalance by presenting a history of what is known about QR teaching as well as to bring alive current QR

teaching and learning through a set of Australian and British case studies Courses visited were located within a variety of disciplines including Education Sociology Anthropology Nursing Psychology Communications and Evaluation were taught by both experienced and inexperienced lecturers were either presented alone or in pairs took place in a range of institutions lasted from seven weeks to a year and involved from 15 to over 100 students It emerged however that no matter what the context several common issues were raised such as Should you teach theory practice or both How do you determine a curriculum for a QR course What is the best way to manage student projects How should students of QR be assessed In what ways can the constraints of University structures be confronted and How can lecturer deficiencies in training and experience be overcome To answer such questions Professor Hurworth draws deftly from personal observations and rich conversations with both lecturers and students from all the courses described As a result many practical ideas for moving the teaching and learning of QR forward are suggested

Waddington, 2013-10-23 Traditional research methods textbooks tend to present an idealized and simplistic picture of the research process. This ground-breaking text, however, features leading international sport researchers explaining how they actually carried out their real-life research projects, highlighting the practical day-to-day problems, false starts, and setbacks that are a normal part of the research process. This book focuses on ten pieces of research that have made a distinctive and valuable contribution to the study of sport. For each one, the author of that research explains how the project was conducted and the issues that they faced. In addition, each piece of research has a commentary from a leading sport scholar outlining why it is regarded as being an important contribution to the discipline of sport studies and how that research can inform studies being carried out today. Contributors to the book describe how, in their own real-life research projects, they initially conceptualized and defined their research projects, secured funding and/or sponsorship from relevant bodies, handled enforced changes to the research plans, confronted obstacles presented by outside bodies, managed inter-personal emotional relationships in the research encounter, managed possible threats to their personal safety or physical integrity, managed good luck, bad luck, and serendipitous findings, dealt with favourable and hostile media reaction to research findings. *Doing Real World Research in Sport Studies* enables students and researchers to develop a more realistic understanding of what the research process actually involves. It charts the development of key research projects in sport and should be essential reading for any sport research methods course.
