Venkataraman,1995 *Chandrasekhar and His Limit* G Venkataraman,1992 The Making of Modern Physics in Colonial India Somaditya Banerjee,2020-05-14 This monograph offers a cultural history of the development of physics in India during the first half of the twentieth century focusing on Indian physicists Satyendranath Bose 1894 1974 Chandrasekhara Venkata Raman 1888 1970 and Meghnad Saha 1893 1956 The analytical category bhadrakalok physics is introduced to explore how it became possible for a highly successful brand of modern science to develop in a country that was still under colonial domination The term Bhadrakalok refers to the then emerging group of native intelligentsia who were identified by academic pursuits and manners Exploring the forms of life of this social group allows a better understanding of the specific character of Indian modernity that as exemplified by the work of bhadrakalok physicists combined modern science with indigenous knowledge in an original program of scientific research The three scientists achieved the most significant scientific successes in the new revolutionary field of quantum physics with such internationally recognized accomplishments as the Saha ionization equation 1921 the famous Bose Einstein statistics 1924 and the Raman Effect 1928 the latter discovery having led to the first ever Nobel Prize awarded to a scientist from Asia This book analyzes the responses by Indian scientists to the radical concept of the light quantum and their further development of this approach outside the purview of European authorities The outlook of bhadrakalok physicists is characterized here as cosmopolitan nationalism which allows us to analyze how the group pursued modern science in conjunction with and as an instrument of Indian national liberation **Bose and His Statistics** G Venkataraman,1992 Bhabha and His Magnificent Obsessions Ganesan Venkataraman,1994 Life and work of Homi Jehangir Bhabha 1909 1966 Indian physicist Science and Modern India: An Institutional History, c.1784-1947: Project of History of Science, Philosophy and Culture in Indian Civilization, Volume XV, Part 4 Das Gupta,1900 Science and Modern India An Institutional History c 1784 1947 Project of History of Science Philosophy and Culture in Indian Civilization Volume XV Part 4 comprises chapters contributed by eminent scholars It discusses the historical background of the establishment of science institutes that were established in pre Independence India and still exist their functions and their present status This volume discusses Indian science institutes that specialize in a particular field It also delves into the area of engineering sciences **Hot Story,a (v.i.p.)** G Venkataraman,1993 History of Science, Philosophy and Culture in Indian Civilization: pt. 1. Thermodynamics And Equations Of State For Matter: From Ideal Gas To Quark-gluon Plasma Vladimr E Fortov, 2016-03-24 The monograph presents a comparative analysis of different thermodynamic models of the equations of state The basic ideological premises of the theoretical methods and the experiment are considered The principal attention is on the description of states that are of greatest interest for the physics of high energy concentrations which are either already attained or can be reached in the near future in controlled terrestrial conditions or are realized in astrophysical objects at different stages of their evolution Ultra extreme astrophysical and nuclear physical applications are also analyzed where the thermodynamics of matter is affected substantially by relativism high power gravitational and magnetic fields thermal radiation transformation of nuclear particles nucleon neutronization and quark deconfinement The book is intended for a wide range of specialists engaged in the study of the equations of state of matter and high energy density physics as well as for senior students and postgraduates

The Analysis of Starlight J. B. Hearnshaw, 1990-04-19 This book presents a detailed pedagogical account of the equation of state and its applications in several important and fast growing topics in theoretical physics chemistry and engineering This book is the story of the analysis of starlight by astronomical spectroscopy It describes the development of the subject from the time of Joseph Fraunhofer who in 1814 used a telescope mounted prism to observe the spectral light emitted from several bright stars He discovered that light was missing at certain colours wavelengths in the starlight and these so called spectral lines were subsequently shown to hold clues to the nature of the stars themselves The book explains how the classification of stars using their line spectra developed into a major branch of astronomy whilst new methods in astrophysics made possible the approximate quantitative analysis of spectral lines in the 1920s and 1930s After the Second World War these techniques

were considerably improved when computers were programmed to model the structure of the outer layers of stars Basic concepts in spectroscopy and spectral analysis are also covered and finally Dr Hearnshaw comments on the stellar spectroscopy of some individual star **Quantum revolution** G.
