Geophysical Studies (1960-1972) Frank F. H. Wang, Paula Quinterno, 1974 Interpreting Pre-Quaternary Climate from
the Geologic Record Judith Totman Parrish, 1998 The earth's pre Quaternary period more than two million years ago has
been studied systematically only since the 1960's when geologists started to take seriously the concept that the continents
have changed position on the earth's surface While previous books have dealt with climate models and paleoclimate this is
the first to offer a sustained exploration of the methods that are the foundation of any interpretation of earth processes

Feldspar Minerals J.V. Smith, 2013-06-29 During the past two centuries crystallography mineralogy and petrology have
evolved from simple compilations of data to powerful disciplines based on interlocking networks of laws hypotheses and rules
of thumb While many data still consist of isolated facts which defy synthesis a gratifying portion can be organized according
to physical and chemical principles Unfortunately the separation of physical sciences into subdivisions especially at the
teaching level makes it difficult to integrate the different approaches to minerals This separation is worsened by the
increasing technical demands of chemical and physical theories by the number and complexity of experimental methods by
the sheer mass of facts in an observational discipline such as mineralogy or petrology and by the explosion of papers This
book concentrates on those aspects of the genesis and properties of feldspar minerals which can be related to physical and
chemical principles My main aim is frankly pedagogic I wish to show how chemical and physical principles can be combined

with geologic observation to produce an enhanced level of understanding of the genesis of minerals The feldspars which demonstrate almost all of the general principles provide the most suitable example **Dictionary Catalog of the Department Library** United States.
