Non-Standard Inferences in Description Logics Ralf Küsters, 2001-07-25 Description logics DLs are used to represent structured knowledge Inference services testing consistency of knowledge bases and computing subconcept superconcept hierarchies are the main feature of DL systems Intensive research during the last fifteen years has led to highly optimized systems that allow to reason about knowledge bases efficiently However applications often require additional non standard inferences to support both the construction and the maintenance of knowledge bases thus making the inference procedures again incomplete This book which is a revised version of the author s PhD thesis constitutes a significant step to fill this gap by providing an excellent formal foundation of the most prominent non standard inferences The descriptions given include precise definitions complete algorithms and thorough complexity analysis With its solid foundation the book also serves as a basis for future research

Ω-Bibliography of Mathematical Logic Wolfgang Rautenberg, 1987-06-16 Gert H Muller The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect In addition given the rapidly growing sophistication specialization and hence subdivision of logic researchers students and teachers may have a hard time getting an overview of the existing literature particularly if they do not have an extensive library available in their neighbourhood they simply do not even know what to ask for More specifically if someone vaguely knows that something vaguely connected with his interests exists somewhere in the literature he may not be able to find it even by

searching through the publications scattered in the review journals Answering this challenge was and is the central motivation for compiling this Bibliography The Bibliography comprises presently the following six volumes listed with the corresponding Editors I Classical Logic W Rautenberg II Non classical Logics W Rautenberg III Model Theory H D Ebbinghaus IV Recursion Theory P G Hinman V Set Theory A R Blass VI Proof Theory Constructive Mathematics J E Kister D van Dalen A S Troelstra
