Quintessence The Search For Dark Matter In The Universe:

The Fifth Essence Lawrence M. Krauss, 1991-07-16 More than 2 000 years ago Aristotle proposed adding a new substance to the four elements of earth air fire and water quintessence Here there is overwhelming evidence that more than 90 percent of the universe is made up of a mysterious form of matter Illustrated **The Fifth Essence** Lawrence M.

Krauss, 1990 **Quintessence** Lawrence M. Krauss, 2001 Will the universe continue to expand forever reverse its expansion and begin to contract or reach a delicately poised state where it simply persists forever The answer depends on the amount and properties of matter in the universe and that has given rise to one of the great paradoxes of modern cosmology there is too little visible matter to account for the behaviour we can see Over 90 percent of the universe consists of missing mass or dark matter what Lawrence Krauss in his classic book termed the fifth essence In this new edition of *The Fifth Essence* retitled *Quintessence* after the now widely accepted term for dark matter Krauss shows how the dark matter problem is now connected with two of the hottest areas in recent cosmology the fate of the universe and the cosmological constant With a new introduction epilogue and chapter updates Krauss updates his classic and shares one of the most stunning discoveries of recent years an antigravity force that explains recent observations of a permanently expanding universe **Identification**

Of Dark Matter, The - Proceedings Of The Fourth International Workshop Vitaly Kudryavtsev, Neil J C Spooner, 2003-05-07 This book contains written versions of the presentations made at the 4th International Workshop on the Identification of Dark Matter IDM 2002 held in York UK in September 2002 The objective of this workshop series is to assess the status of work attempting to identify what constitutes dark matter in particular to consider the techniques being used how successful they are and what new techniques are likely to improve prospects for identifying likely dark matter candidates in the future At IDM 2002 special emphasis was placed on recent results obtained in searches for baryonic and non baryonic dark matter The proceedings include reviews of major topics on dark matter as well as short contributed talks
