Saline Agriculture Salt Tolerant Plants For Developing Countries:

Saline Agriculture National Research Council, Office of International Affairs, Board on Science and Technology for International Development, 1990-02-01 Saline Agriculture, 1990 Saline Agriculture National Research Council (U.S.). Panel on Saline Agriculture in Developing Countries, 1990 *Saline Agriculture* Report of a Panel of the Board on Science and Technology for International Development, 1990 *Saline Agriculture : Salt-Tolerant Plants for Developing Countries*, 1990 *Towards the rational use of high salinity tolerant plants* Helmut Lieth, A.A. Al Masoom, 2012-12-06 The Symposium on high salinity tolerant plants held at the University of Al Ain in December 1990 dealt primarily with plants tolerating salinity levels exceeding that of ocean water and which at the same time are promising for utilization in agriculture or forestry These plants could be very useful for a country like the UAE where fresh water resources are very scarce and the groundwater available at some places is already very salty More than 60 million woody trees shrubs have been planted so far and more are planned for the inland plains underlain with brackish groundwater These species were no solution for the widely barren shoreline of the UAE Here mangrove species were of potential use and one species *Avicennia Marina* occurs widely and has been successfully planted for about a decade Converting the tree plantations into economically useful cropping systems is still a problem requiring much research and development The book deals in several sections with conventional irrigation systems using marginal water The species used in these systems are mostly hybrids of conventional crops The irrigation systems however have similar problems as may be expected for irrigation with seawater Papers show the participants experiments in this area The volume serves as a link between scientists working for the improvement of classical irrigation systems and those interested in the application of a new dimension of salinity levels for irrigation water

Prospects for Saline Agriculture R. Ahmad, K.A. Malik, 2013-11-09 Saline land is a resource capable of significant production Recent advances in research in breeding for salt tolerance in wheat biotechnology in rice and selection and rehabilitation of salt tolerant plants are of economic importance in arid saline conditions This book gives some practical approaches for saline agriculture and afforestation and describes examples of cultivating salt tolerant halophytic plants for commercial interest on salt affected land or with highly salinized water in Australia China Central Asia Egypt Pakistan and Russia It also explores the possibilities of arid saline agriculture and afforestation in UAE *Ecophysiology of High Salinity Tolerant Plants* M. Ajmal Khan, Darrell J. Weber, 2006-05-16 The halophytes are highly specialized plants which have greater tolerance to salt They can germinate grow and reproduce successfully in saline areas which would cause the death of regular plants Most halophytic species are found in salt marsh systems along seashores or around landlocked inland lakes and flat plains with high evaporation The halophytes play very significant role in the saline areas specially in the coast by overcoming the salinity in different ways viz with regulating mechanisms in which excess salts are excreted and with out regulating mechanism which may include succulents or cumulative types Besides that they protect coast from erosion and cyclones

provide feeding ground and nursery for fish shrimps and birds Halophytes get increasing attention today because of the steady increase of the salinity in irrigation systems in the arid and semi arid regions where the increasing population reaches the limits of freshwater availability In many countries halophytes have been successfully grown on saline wasteland to provide animal fodder and have the potential for rehabilitation and even reclamation of these sites The value of certain salt tolerant grass species has been recognized by their incorporation in pasture improvement programs in many salt affected regions throughout the world There have been recent advances in selecting species with high biomass and protein levels in combination with their ability to survive a wide range of environmental conditions including salinity
