Carter, 2015-08-11 This title first published in 1987 examines the topic of nuclear waste management and the way in which the public reacts to this issue Part 1 explores the sources of public unease such as the way in which nuclear waste had failed to be properly contained in the past Part 2 looks at the search for a waste policy and the introduction of The Nuclear Waste Policy Act Part 3 examines the waste problem from the standpoint of it being an international issue and finally Part 4 looks to the future and the lessons that we can learn from past nuclear waste management failures This book will be of interest to students of environmental management *Decision-making and*

Radioactive Waste Disposal Andrew Newman, Gerry Nagtzaam, 2015-11-19 The International Atomic Energy Agency estimates that nuclear power generation facilities produce about 200 000 cubic meters of low and intermediate level waste each year Vital medical procedures industrial processes and basic science research also produce significant quantities of waste All of this waste must be shielded from the population for extended periods of time Finding suitable locations for disposal facilities is beset by two main problems community responses to siting proposals are generally antagonistic and as a result governments have tended to be reactive in their policy making *Decision making and Radioactive Waste Disposal* explores these issues utilizing a linear narrative case study approach that critically examines key stakeholder interactions in order to explain how siting decisions for low level waste disposal are made Five countries are featured the US Australia Spain South Korea and Switzerland This book seeks to establish an understanding of the political economic environmental legal and social dimensions of siting across those countries This valuable resource fills a gap in the literature and provides recommendations for future disposal facility siting efforts The book will be of interest to students and scholars of environmental law justice management politics energy and security policy as well as decision makers in government and industry **Governance of**

Public Policy, 1999 **The Road to Yucca Mountain** J. Samuel Walker, 2009-09-02 In *The Road to Yucca Mountain* J. Samuel Walker traces the U S government's tangled efforts to solve the technical and political problems associated with radioactive waste. From the Manhattan Project through the designation in 1987 of Yucca Mountain in Nevada as a high level waste repository, Walker thoroughly investigates the approaches adopted by the U S Atomic Energy Commission (AEC). He explains the growing criticism of the AEC's waste programs, such as the AEC's embarrassing failure in its first serious effort to build a high level waste repository in a Kansas salt mine. Clearly and accessibly, Walker explains the issues surrounding deep geological disposal and surface storage of high level waste and spent reactor fuel. He analyzes the equally complex and divisive question of fuel reprocessing. He weaves reliable research with fresh insights about nuclear science, geology, politics, and public administration, making this original and authoritative account an essential guide for understanding the continuing controversy over an illusive and emotional topic.

Encyclopedia of Environmental Science John F. Mongillo, Linda Zierdt-Warshaw, 2000 From Edward Abbey to zooxanthellae, this A-Z resource gives readers over 1,000 entries that tell the story of environmental science. Nuclear Decommissioning and Society Martin J. Pasqualetti, 2019-03-28 Originally published in 1990, this book argues that a better understanding of the social impact of decommissioning in areas such as jobs, waste, economics, opinion, law, public policy, land use, and legacies is vital to the successful application of any technical solution. The issues raised are divided into three areas which deal with those problems that have already been recognized, the questions that decommissioning itself will raise, and those that may result from likely future developments. The book aims to initiate a process of appraisal by examining several of the more obvious social ties to decommissioning.

Science, Technology, And Politics Gary Bryner, 2019-06-21 This book began several years ago as a project organized by members of the Science and Technology Studies section of the American Political Science Association. It is part of an ongoing attempt by members of the section and others to focus scholarly attention on the political and social implications of technological change and scientific advances. Part of the concern is to identify theories, conceptual frameworks, and concepts from political science that can usefully be applied to the study of science and technology. Part of the concern is to explore how science and technology-related concerns help illuminate and test some of the enduring theories of political science. We hope to contribute to the development of a strong theoretical underpinning for science and technology studies. We hope that such an enrichment of the theoretical bases for understanding science and technology-related phenomena will also contribute to more effective and appropriate public policies for regulating and encouraging scientific and technological developments. This book is an attempt to marry theoretical exposition and applied policy inquiry.

Social Discourse and Environmental Policy Helen Addams,John L. R. Proops,2000-11-27 As governments and the wider public become increasingly concerned about environmental problems the necessity for competent environmental policies is growing The contributors to this highly original book attempt to demonstrate how the use of Q methodology can result in the development of more effective socially sensitive environmental policy options The book highlights the history of Q methodology a technique for systematically studying the subjectivity of individuals and provides a brief yet comprehensive account of its theory and a detailed guide to the various stages of a Q study The methodology is then applied to explore the discourses concerning the relationship between society and a diverse range of environmental issues including environmental protest civil aviation policy forest policy and land use options Radioactive Waste Disposal at Sea Lasse

Ringius,2000-11-20 Most studies of environmental regimes focus on the use of power the pursuit of rational self interest and the influence of scientific knowledge Lasse Ringius focuses instead on the influence of public ideas and policy entrepreneurs He shows how transnational coalitions of policy entrepreneurs can build environmental regimes and how global environmental nongovernmental organizations can act as catalysts for regime change This is the first book length empirical study of the formation of the global ocean dumping regime in 1972 and its subsequent development which culminated in the 1993 global ban on the dumping of low level radioactive waste at sea Ringius describes the structure within which global ocean dumping policy particularly policy with regard to the disposal of radioactive waste is embedded He also examines the political construction of ocean dumping as a global environmental problem the role of persuasion and communication in an

international setting and the formation of international public opinion He does not argue that the influence of ideas alone explains how regimes develop but claims that it is necessary to understand how actors interests and ideas together influence regimes and international environmental policy **Environmental Politics and Policy** Walter A. Rosenbaum, 2016-08-01

Walter A Rosenbaum s classic *Environmental Politics and Policy* Tenth Edition once again provides definitive coverage of environmental politics and policy lively case material and a balanced assessment of current environmental issues The first half of the book sets needed context and describes the policy process while the second half covers specific environmental issues such as air and water toxic and hazardous substances energy and a global policymaking chapter focused on climate change and transboundary politics Covering major environmental policy initiatives and controversies during President Obama s two terms and capturing the sudden and radical changes occurring in the American energy economy this Tenth Edition offers the needed currency and relevancy for any environmental politics course Approaches to Risk Management in Remediation of Radioactively Contaminated Sites National Council on Radiation Protection and Measurements, 2004

The Mining Law John D. Leshy, 1987 In this highly entertaining as well as profoundly scholarly study of the 1872 Mining Law John Leshy has produced both a legal treatise and a history of the West written from the vantage point of mineral exploration and production The Mining Law illuminates some of the more obscure corners of Western history federal land and resource policy and the relationships among various branches of government in making and carrying out policy For more than a century the mining of hard rock minerals in the United States has been carried out under this law which was written to promote mineral development in the age of the pick and shovel prospector It is the last important survivor of the great laws undergirding the westward expansion The Mining Law has never been changed to reflect modern mining technologies or newer social values that question whether mineral extraction is the best use of the land and its resources From its enactment the Mining Law s inadequacies have given rise to illegal abuse litigation and patchwork regulation by federal agencies and judge made law Leshy explains how the law has survived by a combination of executive and judicial manipulation in the face of legislative paralysis Today as concern mounts about economic efficiency government regulation environmental protection the rebuilding of the nation s industrial base and competing uses of the land and its resources the argument for reform of the law becomes compelling The present law not only obstructs the very mineral development it was designed to promote it may no longer be in the national interest Certainly any future attempts to rewrite or amend the Law will start off with Leshy s exposition and analysis of its origins operation and implementation and his detailed examination of the issues surrounding the law its interpretation by courts and administrative agencies and the attempts to adapt the law to changing conditions and social goals Assessing the prospect for reform in today s political climate he suggests arrangements regarding the law s reform that might be concluded by industry small operators and environmental protection advocates as well as creative measures that might be taken by Congress the president and the courts **The Rise of Nuclear Fear**

Spencer R. Weart, 2012-03-19 After the Fukushima Nuclear Power Plant had a meltdown protesters around the world challenged nuclear power Climate change has never aroused this visceral dread Weart dissects this paradox showing that powerful images surrounding nuclear energy hold us captive allowing fear rather than facts to drive our thinking and public policy

Disposition of High-Level Radioactive Waste Through Geological Isolation National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Board on Radioactive Waste Management, 1999-11-07 During the next several years decisions are expected to be made in several countries on the further development and implementation of the geological disposition option The Board on Radioactive Waste Management BRWM of the U S National Academies believes that informed and reasoned discussion of relevant scientific engineering and social issues can and should play a constructive role in the decision process by providing information to decision makers on relevant technical and policy issues A BRWM initiated project including a workshop at Irvine California on November 4 5 1999 and subsequent National Academies report to be published in spring 2000 are intended to provide such information to national policy makers both in the U S and abroad To inform national policies it is essential that experts from the physical geological and engineering sciences and experts from the policy and social science communities work together Some national programs have involved social science and policy experts from the beginning while other programs have only recently recognized the importance of this collaboration An important goal of the November workshop is to facilitate dialogue between these communities as well as to encourage the sharing of experiences from many national programs The workshop steering committee has prepared this discussion for participants at the workshop It should elicit critical comments and help identify topics requiring in depth discussion at the workshop It is not intended as a statement of findings conclusions or recommendations It is rather intended as a vehicle for stimulating dialogue among the workshop participants Out of that dialogue will emerge the findings conclusions and recommendations of the National Academies report
