Salce, 2004-01-28 *Rings Modules Algebras and Abelian Groups* summarizes the proceedings of a recent algebraic conference held at Venice International University in Italy. Surveying the most influential developments in the field, this reference reviews the latest research on Abelian groups, algebras, and their representations, module and ring theory, and topological algebraic structures, and provides more than 600 current references and 570 display equations for further exploration of the topic. It provides stimulating discussions from world-renowned names including Laszlo Fuchs, Robert Gilmer, Saharon Shelah, Daniel Simson, and Richard Swan to celebrate 40 years of study on cumulative rings. Describing emerging theories, *Abelian Groups, Rings, Modules, and Homological Algebra* Pat Goeters, Overtoun M.G. Jenda, 2016-04-19. About the book: In honor of Edgar Enochs and his venerable contributions to a broad range of topics in Algebra, top researchers from around the world gathered at Auburn University to report on their latest work and exchange ideas on some of today's foremost research topics. This carefully edited volume presents the refereed papers of the *par Rings, Modules, and the Total* Friedrich Kasch, Adolf Mader, 2004-06-25. Accessible to anyone with a basic knowledge of ring and module theory, a short introduction to torsion-free Abelian groups is included. **Abelian Groups, Rings and Modules** Andrei V. Kelarev, 2001. This volume presents the proceedings from the conference on Abelian Groups, Rings, and Modules (GRAM) held at the University of Western Australia, Perth. Included are articles based on talks given at the conference as well as a few specially invited papers. The proceedings were dedicated to Professor Laszlo Fuchs. The book includes a tribute and a review of his work by his long-time collaborator Professor Luigi Salce. Four surveys from leading experts follow Professor Salce's article. They present recent results from active research areas. *Approximations and Endomorphism Algebras of Modules* Rüdiger Göbel, Jan Trlifaj, 2012-10-01. This second revised and substantially extended edition of *Approximations and Endomorphism Algebras of Modules* reflects both the depth and the width of recent developments in the area since the first edition appeared in 2006. The new division of the monograph into two volumes roughly corresponds to its two central topics: approximation theory (Volume 1) and realization theorems for modules (Volume 2). It is a widely accepted fact that the category of all modules over a general associative ring is too complex to admit classification. Unless the ring is of finite representation type, we must limit attempts at classification to some restricted subcategories of modules. The wild character of the category of all modules or of one of its subcategories C is often indicated by the presence of a realization theorem, that is, by the fact that any reasonable algebra is isomorphic to the endomorphism algebra of a module from C . This results in the existence of pathological direct sum decompositions, and these are generally viewed as obstacles to classification. In order to overcome this problem, the approximation theory of modules has been developed. The idea here is to select suitable subcategories C whose modules can be classified, and then to approximate arbitrary modules by those from C . These approximations are neither unique nor functorial in general, but there is a rich supply available appropriate to the requirements of various particular applications. The authors bring the two theories together. The first volume, *Approximations*, sets the scene in Part I by introducing the main classes of modules.

relevant here the S complete pure injective Mittag Leffler and slender modules Parts II and III of the first volume develop the key methods of approximation theory Some of the recent applications to the structure of modules are also presented here notably for tilting cotilting Baer and Mittag Leffler modules In the second volume Predictions further basic instruments are introduced the prediction principles and their applications to proving realization theorems Moreover tools are developed there for answering problems motivated in algebraic topology The authors concentrate on the impossibility of classification for modules over general rings The wild character of many categories \mathcal{C} of modules is documented here by the realization theorems that represent critical R algebras over commutative rings R as endomorphism algebras of modules from \mathcal{C} The monograph starts from basic facts and gradually develops the theory towards its present frontiers It is suitable both for graduate students interested in algebra and for experts in module and representation theory [Handbook of Tilting Theory](#) Lidia Angeleri Hügel, Dieter Happel, Henning Krause, 2007-01-04 A handbook of key articles providing both an introduction and reference for newcomers and experts alike *Modules over Discrete Valuation Rings* Piotr A. Krylov, Askar A. Tuganbaev, 2018-09-24 This book provides the first systematic treatment of modules over discrete valuation domains which play an important role in various areas of algebra especially in commutative algebra Many important results representing the state of the art are presented in the text along with interesting open problems This updated edition presents new approaches on p adic integers and modules and on the determinability of a module by its automorphism group Contents Preliminaries Basic facts Endomorphism rings of divisible and complete modules Representation of rings by endomorphism rings Torsion free modules Mixed modules Determinity of modules by their endomorphism rings Modules with many endomorphisms or automorphisms **Non-Unique Factorizations** Alfred Geroldinger, Franz Halter-Koch, 2006-01-13 From its origins in algebraic number theory the theory of non unique factorizations has emerged as an independent branch of algebra and number theory Focused efforts over the past few decades have wrought a great number and variety of results However these remain dispersed throughout the vast literature For the first time Non Unique Factoriza *Algebra and its Applications* Syed Tariq Rizvi, Asma Ali, Vincenzo De Filippis, 2016-11-18 This book discusses recent developments and the latest research in algebra and related topics The book allows aspiring researchers to update their understanding of prime rings generalized derivations generalized semiderivations regular semigroups completely simple semigroups module hulls injective hulls Baer modules extending modules local cohomology modules orthogonal lattices Banach algebras multilinear polynomials fuzzy ideals Laurent power series and Hilbert functions All the contributing authors are leading international academicians and researchers in their respective fields Most of the papers were presented at the international conference on Algebra and its Applications ICAA 2014 held at Aligarh Muslim University India from December 15 17 2014 The book also includes papers from mathematicians who couldn't attend the conference The conference has emerged as a powerful forum offering researchers a venue to meet and discuss advances in algebra and its applications inspiring further research directions

Contributions in Algebra and Algebraic Geometry Shrikrishna G. Dani, Surender K. Jain, Jugal K. Verma, Meenakshi P. Wasadikar, 2019-10-07 This volume contains the proceedings of the International Conference on Algebra Discrete Mathematics and Applications held from December 9-11, 2017 at Dr Babasaheb Ambedkar Marathwada University Aurangabad Maharashtra India. Contemporary topics of research in algebra and its applications to algebraic geometry, Lie groups, algebraic combinatorics, and representation theory are covered. The articles are devoted to Leavitt path algebras, roots of elements in Lie groups, Hilbert's Nullstellensatz, mixed multiplicities of ideals, singular matrices, rings of integers, injective hulls of modules, representations of linear symmetric groups, and Lie algebras, the algebra of generic matrices, and almost injective modules. *Ring Theory and Its Applications* Dinh Van Huynh, S. K. Jain, Sergio R. López-Permouth, S. Tariq Rizvi, Cosmin S. Roman, 2014-02-21 This volume contains the proceedings of the Ring Theory Session in honor of T. Y. Lam's 70th birthday at the 31st Ohio State Denison Mathematics Conference held from May 25-27, 2012 at The Ohio State University, Columbus, Ohio. Included are expository articles and research papers covering topics such as cyclically presented modules, Eggert's conjecture, the Mittag-Leffler conditions, clean rings, McCoy rings, QF rings, projective and injective modules, Baer modules, and Leavitt path algebras. Graduate students and researchers in many areas of algebra will find this volume valuable as the papers point out many directions for future work; in particular, several articles contain explicit lists of open questions. *Ideal Theory of Commutative Rings and Monoids* Franz Halter-Koch, 2025-06-14 This book offers a concise treatment of multiplicative ideal theory in the language of multiplicative monoids. It presents a systematic development of the theory of weak ideal systems and weak module systems on arbitrary commutative monoids. Examples of monoids that are investigated include, but are not limited to, Mori monoids, Laskerian monoids, Prüfer monoids, and Krull monoids. An in-depth study of various constructions from ring theory is also provided, with an emphasis on polynomial rings, Kronecker function rings, and Nagata rings. The target audience is graduate students and researchers in ring and semigroup theory. Factoring Groups into Subsets Sandor Szabo, Arthur D. Sands, 2009-01-21 Decomposing an abelian group into a direct sum of its subsets leads to results that can be applied to a variety of areas such as number theory, geometry of tilings, coding theory, cryptography, graph theory, and Fourier analysis. Focusing mainly on cyclic groups, *Factoring Groups into Subsets* explores the factorization theory of abelian groups. Multiplicative Ideal Theory in Commutative Algebra James W. Brewer, Sarah Glaz, William Heinzer, Bruce Olberding, 2006-12-15 For over forty years, Robert Gilmer's numerous articles and books have had a tremendous impact on research in commutative algebra. It is not an exaggeration to say that most articles published today in non-Noetherian ring theory and some in Noetherian ring theory as well, originated in a topic that Gilmer either initiated or enriched by his work. This volume, a tribute to his work, consists of twenty-four articles authored by Robert Gilmer's most prominent students and followers. These articles combine surveys of past work by Gilmer and others, recent results which have never before seen print, open problems, and extensive bibliographies. In a concluding article, Robert Gilmer points

out directions for future research highlighting the open problems in the areas he considers of importance Robert Gilmer's article is followed by the complete list of his published works his mathematical genealogical tree information on the writing of his four books and reminiscences about Robert Gilmer's contributions to the stimulating research environment in commutative algebra at Florida State in the middle 1960s The entire collection provides an in depth overview of the topics of research in a significant and large area of commutative algebra

Groups, Rings and Group Rings Antonio Giambruno, Cesar Polcino Milies, Sudarshan K. Sehgal, 2006-01-20 This book is a collection of research papers and surveys on algebra that were presented at the Conference on Groups Rings and Group Rings held in Ubatuba Brazil This text familiarizes researchers with the latest topics techniques and methodologies in several branches of contemporary algebra With extensive coverage it examines broad themes f
