Psychological Clinical Science Teresa A. Treat, Richard R. Bootzin, Timothy B. Baker, 2007 Psychological Clinical Science offers readers insightful appraisals of the most current theory and research in psychopathology and evidence based intervention It honors Richard McFall of Indiana University a visionary psychological clinical scientist widely recognized for his unwavering advocacy for a science of clinical psychology and for the integration of clinical psychology with other subdisciplines of psychological science With the publication of this volume Psychology Press and the Association for Psychological Science are launching jointly a series of festschrifts that honor the careers and contributions of distinguished psychological scientists In keeping with McFall's integrative approach to psychological science contributors to this volume include prominent clinical scientists cognitive scientists and neuroscientists The book details the historical and epistemological underpinnings of psychological clinical science addresses topics of applied significance offers an overview of several model research programs and suggests future

directions in clinical science research application and training An accompanying DVD contains an interview with McFall on his career and the clinical science movement which provides an inspiring and fascinating glimpse of his perspective on the past present and future of psychological clinical science

The Behavioral High-Risk Paradigm in Psychopathology

Gregory A. Miller, 2012-12-06 As editor of the Springer Verlag Series in Psychopathology Lauren Alloy knew of my work in cognitive psychophysiology to study processing anomalies in nonpatients at risk for psychopathology and invited me to edit a book for the series This evolved into an opportunity to address an aspect of the unfortunate nature nurture battle in the field which too often emphasizes genes and macrolevel environment Extreme positions are often taken sometimes unwittingly even though a great deal of the actual research is between the extremes including laboratory psychological and psychophysiological studies There is more to biology than genes and even more to it than things like brain imaging enlarged ventricles glucose metabolism rate and receptor density which have received a great deal of attention in recent years of studies at the One goal of this book is to provide demonstrations intersection between psychology and biology via psychophysiology In parallel another goal is to showcase solid psychological research that may bear directly on what are often considered biological issues For example Chapter 4 by Walker and colleagues can be considered classically psychological because the authors focus on overt behavior Yet some of the importance of their work is its implication of a particular biological process involved in the gross motor behavior anomalies they have identified in the etiology of schizophrenia Similarly whereas in Chapter 7 Klein and Anderson articulate the behavioral high risk paradigm quite well in Chapter 10 Yee relies on their approach in pursuing psychophysiological research on risk for depression

Modeling

Complex Systems John William Shuart, William D. Spaulding, Jeffrey Stephen Poland, 2007-01-01 Describes contemporary approach to the modeling of complex cognitive and behavioral processes This book provides examples of translational research ranging from clinical neuropsychology to self actualization from medical informatics to industrial psychology from programmed learning to psychiatric rehabilitation

Schizophrenia Steven R. Hirsch, Daniel R. Weinberger, 2008-04-15

Schizophrenia is one of the most complex and puzzling diseases to affect mankind It is the most common of the severe mental illnesses psychoses with an estimated prevalence of 0.5-1% in the general population and accounts for a very large portion of the day to day workload of the average psychiatrist 50% of long term psychiatric patients in mental hospitals are schizophrenic There is a great deal of controversy about the causes diagnosis and treatment of schizophrenia with the consequence that a huge amount of research is carried out in the field by psychiatrists psychologists neuroscientists and pharmacologists For the average practising psychiatrist seeing schizophrenics on a regular basis making sense of the vast body of information on the subject and filtering out what is of clinical relevance can be very difficult There is a constant stream of new drugs emerging and the new generation of drugs the so called atypicals is very effective but often expensive The Editors one American and one British are both highly respected clinical psychiatrists who are probably the leading experts

on schizophrenia from their respective countries and jointly have published almost 150 papers on the subject. They have brought together a strong group of contributors from the USA, UK and Europe to produce what will be an essential reference for the trainee and practising psychiatrist. The book consists of four sections: descriptive aspects, causative aspects, physical treatments and psychological/behavioural social treatments. There will be discussion of the theoretical controversies over symptomatology, classification and aetiology, the relationship of schizophrenia to the other psychoses, the significance of positive and negative symptoms and pre-morbid personality. There will be chapters on organic models of schizophrenia, neurodevelopmental, genetic and structural studies and the role of high expressed emotion. The final section will cover social and environmental treatment, the role of the families of schizophrenics and the psychoanalytical therapies. There is a new chapter on the patient's perspective written by a former patient.

Clustering and Classification Phipps Arabie, Geert de

Soete, 1996. At a moderately advanced level, this book seeks to cover the areas of clustering and related methods of data analysis where major advances are being made. Topics include hierarchical clustering, variable selection and weighting, additive trees and other network models, relevance of neural network models to clustering, the role of computational complexity in cluster analysis, latent class approaches to cluster analysis, theory and method with applications of a hierarchical classes model in psychology and psychopathology, combinatorial data analysis, clusterwise aggregation of relations, review of the Japanese language results on clustering, review of the Russian language results on clustering and multidimensional scaling, practical advances and significance tests.
