Money Supply Process A Comparative Analysis:

The Money Supply Process Dimitrije Dimitrijević, George Macesich, 1991-02-14 A pioneering work in comparative monetary and financial studies this is the first international comparative empirical study of the money supply process MSP that involves all of the basic types of economies and institutional economic systems at all levels of economic development As the authors note at the outset the highly relative nature of the MSP contributes to wide differences in the MSP in different types of economies Yet the MSP is one of the most important topics of both monetary theory and monetary practice The comparative approach adopted here enables the authors to explain the differences that do occur in the MSP across economies and what causes them By properly defining the general theory and overall monetary theory of MSP the authors offer the reader both a better understanding of the national MSP and a broad framework of possibilities for improving the efficiency of monetary policy The authors begin by describing their approach to an analysis of the MSP in national economies and the concepts and models used in this analysis They then explain the classification of economies used in the study and their methodological approach which is based on a two dimensional flow of funds accounts matrix Four chapters present the empirical evidence derived from this approach Included are both a holistic analysis and a structural comparative analysis of the MSP A separate chapter presents a comparative analysis involving 100 countries of the MSP during the 1978-83 time period Finally the authors look at the influence of the balance of payments and of domestic institutional sectors on the MSP Their concluding chapters summarize their findings and point the way to further research in this area Scholars and policymakers in economics macroeconomics and monetary policy will find this an illuminating addition to the literature of the money supply process
