Optimizing the Duration of Point Counts for Monitoring Trends in Bird Populations Jared Verner, 1988 Minute by minute analysis of point counts of birds in mixed conifer forests in the Sierra National Forest central California showed that cumulative counts of species and individuals increased in a curvilinear fashion but did not reach asymptotes after 10 minutes of counting Comparison of the expected number of individuals counted per hour with various combinations of counting time and noncounting times for record keeping and travel between counting stations showed that 10 minute counts were most efficient in most cases Counting longer than 10 minutes is not

recommended because other increased risk of double counting some individuals *General Technical Report PNW-GTR*

Elzinga, Daniel W. Salzer, John W. Willoughby, James P. Gibbs, 2009-05-11 Monitoring Plant and Animal Populations offers an
overview of population monitoring issues that is accessible to the typical field biologist and land managers with a modest
statistical background. The text includes concrete guidelines for ecologists to follow to design a statistically defensible
monitoring program. User friendly practical guide written in a highly readable format. The authors provide an interdisciplinary
scope to address the current widespread interest in monitoring in many environmental fields including pure and applied
ecology, conservation biology and wildlife management. Emphasizes the role of monitoring in adaptive management. Defines
important terminology and contrasts monitoring with other data collection activities. Covers the applicable principles of
sampling and shows how to design a monitoring project. Provides a step by step overview of the monitoring process
illustrated by flow charts and references. The authors also offer guidelines for analyzing and interpreting monitoring data.
Illustrates the foundation of management objectives and describes their components, types and development. Describes
common field techniques for measuring important attributes of animal and plant populations. Reviews different methods for
recording monitoring data in the field, managing the data and communicating data to policymakers.
