Production of Biologicals from Animal Cells in Culture R. E. Spier, J. B. Griffiths, B. Meignier, 2013-09-24 Production of Biologicals from Animal Cells in Culture reviews the state of the art in animal cell biotechnology with emphasis on the sequence of events that occur when generating a biological from animal cells in culture Methods that enable adjustment of nutrient feed streams into perfusion bioreactors so as to increase productivity are described A number of issues are also addressed such as the usefulness of the fingerprint method for cell characterization Comprised of 135 chapters this book begins with an overview of the problems and benefits of animal cell culture followed by a discussion on the isolation of immortal murine macrophage cell lines The reader is systematically introduced to the use of DNA fingerprinting to characterize cell banks immortalization of cells with oncogenes lipid metabolism of animal cells in culture and energetics of glutaminolysis Subsequent chapters explore serum free and protein free media the physiology of animal cells gene expression in animal cell systems and animal cell bioreactors The monitoring and assay of animal cell parameters are also considered along with downstream processing and regulatory issues This monograph will be of interest to students practitioners and investigators in the fields of microbiology and biotechnology

Animal Cell Culture and Technology Michael Butler, 2004-08-02 Animal cell culture is an important laboratory technique in the biological and medical sciences. It has become an essential tool for the study of most biochemical and physiological processes and the use of large scale animal cell culture has become increasingly important to the commercial production of specific compounds for the pharmaceutical industry. This book describes the basic requirements for establishing and maintaining cell cultures both in the laboratory and in large scale operations. Minimal background knowledge of the subject is assumed and therefore it will be a readable introduction to animal cell culture for undergraduates, graduates and experienced researchers. Reflecting the latest developments and trends in the field, the new topics include the latest theory of the biological clock of cell lines, the development of improved serum free media formulations, the increased understanding of the importance and control of protein glycosylation and the humanization of antibodies for therapeutic use.

Bioreactor System Design Juan A. Asenjo, 1994-11-17 Describes the state of the art techniques and methods involved in the design, operation, preparation and containment of bioreactor systems taking into account the interrelated effects of variables associated with both upstream and downstream stages of the design process. The importance of the initial steps in the development of a bioprocess such as strain and media selection that have an overwhelming influence on all further operations is emphasized. This work is intended for biochemical, chemical and bioprocess engineers, biotechnologists, industrial biochemists, micro and molecular biologists, food scientists and upper level undergraduate and graduate students in these disciplines.
